
Container positioning for inspection

COHAOR

CONTAINER SPECIAL HANDLING MESSAGE

Port de Barcelona

**GUIDELINE FOR THE UN/EDIFACT
D00B COHAOR MESSAGE**

Version 1.5

Message:	COHAOR
Version:	1.5
Date:	November 2010
Source:	<i>Port de Barcelona</i>

CHANGE CONTROL

Version 1.5 includes the following changes to the previous version 1.4b from March 2010 (changes named from P1 to P6 were agreed at the working group meeting from 13th May 2010 and changes from P7 to P15 were agreed at the working group meeting from 23th June 2010):

- When goods come from “Inland Customs” and they have to be inspected in the Border Inspection Post, the operator will always identify these goods as break bulk cargo in order to avoid fulfilling the segments related with the maritime transport (NAD, RFF, LOC and TDT).
- In the section of “choreography” it has been added a new use for COHAOR message with code “846” at DE1001. When the SCPP knows that the received information has some mistakes that can be solved replacing the information received by the correct one, the SCPP can update in its system the information received and then, a message can be sent to the customs broker with the information present in the SCPP system and a copy can also be sent to the container terminal.
- (P1) A new code has been included for DE1001 of segment BGM:
 - [844] “Express Inspection Request”. This positioning modality may only be applied for several types of inspections (i.e. Border Inspection Post or Non Intrusive Inspections). The choreography will be the same than for regular inspections but the system will assign higher priority for these requests than the regular ones.
- (P5) It is mandatory to declare the “invoice” when someone should pay for the operation requested.
- (P4) Several changes have been made to separate the location of the inspection from the requested period for the positioning. On a previous version, the code for the location included the requested period for positioning.
 - At the DTM segment (Group 4) it has been included the possibility of declaring date and time (since now, only the date was possible). DE2380 will include the time and DE2379 will include the new code “203” that means the format: “CCYYMMDDHHMM”. Time will be used for identifying positioning periods and, for those, a convention will be applied:
 - If the operator only can choose between mornings and afternoons:
 - 08:00 will stand for the “morning period”
 - 14:00 will stand for the “afternoon period”
 - If the day is divided in more periods, the starting time of the period will be declared: i.e. if the period is from 11:00 to 14:00, it has to be declared 11:00.
 - At the DE3225 of the LOC segment (Group 4) it has been removed several codes that were used for afternoon positioning.
- (P13) In the “Inspection instructions message” or the “Communication about a previous scheduled inspection message” from scenarios 1 and 2, and in the “rejection message” defined in scenario 2 it has included the possibility of including some comments. For this purpose, a new occurrence of segment FTX at header level has been included with “AFB” in data element 4451.
- (P16) When a regulatory body requests the inspection of a goods item that is less than the container load it could be necessary to declare the total weight of the container and the total number of packages contained inside the equipment.
A second occurrence of segment MEA with “AAD” qualifier could be used for declaring the total gross weight and segment CNT could be used with the total number of packages contained in the LCL container.

Version 1.4b includes the following changes to the previous version 1.4 from November 2009:

- Code [Z29] “Guardia Civil” has been deleted from data element 1153 of segment RFF (Group 4).

Version 1.4 includes the following changes to the previous version 1.3 from May 2009:

- PDI inspections are performed in a special area and this area has to be included in DE3225 from LOC segment (group 4) as [PDI]. And PDI will be deleted as a service (code [Z31]) from DE1153 from segment RFF (group 4).
- A new inspection area has been included: [BRT] for Barcelona Reefer Terminal.
- Break bulk cargo can be declared in this message using the prefix “BULK” followed by the weight of the goods item, instead of the container number.
- When cargo it is not containerized and the inspection has to be performed on a special area of the Port, several data will not be mandatory and they would be only optional: shipping agent, vessel details, ship’s call number, place of origin (terminal),...

Version 1.3 includes the following changes to the previous version 1.2 from December 2008:

- When the SCPP has received the request for an inspection manually (in a paper form, because the sender was not able to send an EDI message) and the SCPP assigns some resources and a date for the inspection (COHAOR message with code “845” at DE1001) the reference to the previous message in data element 1154 from segment RFF (group 1) will start with the string “MANUAL”.
- Some codes have been moved from DE9417 from segment GOR to DE4079 from segment HAN:
 - Code “3” *fumigation* will be code “17” in DE4079 from segment HAN.
 - Code “10” *ventilation* will be code “18” in DE4079 from segment HAN.
 - Code “11” *ventilation with 5 days of permanence* will be code “19” in DE4079 from segment HAN.
- Only one occurrence of segment GOR will be possible.
- Code “4” (Relay) has been deleted from DE8323 from segment GOR (group 4).
- TDT must be mandatory for import instead of export.
- It is mandatory the use of the combined nomenclature code and the literal description of goods.

Version 1.2 includes the following changes to the previous version 1.1 from July 2008:

- It has been deleted the CNT segment from the branching diagram (page 10).
- In page 34, group 6 is changed to 11, because 6 was a mistake.
- DTM segment and header level has changed from optional to required.
- DE1153 of segment RFF in group 4 will be used for identifying the regulatory body that has requested the inspection. DE1154 will be used for identifying the number of the document that requested the inspection.
- DE9415 of segment GOR is not used.
- Use of TMP and RNG segments. When it is a controlled temperature container a value for the temperature could be declared at the TMP segment or it has to be declared a range of temperatures using the RNG segment. C239 has changed to optional.
- Use of DE1131 in C237 at EQD segment will be required for equipment identification numbers according to the ISO6346 standard.

Version 1.1 includes the following changes to the previous version 1.0 from April 2008:

- It has been included a detailed description of the message choreography in two different scenarios. The first one when the inspection is executed at the Border Inspection Service (BIP or PIF in Spanish) or when it is realized at the Non Intrusive Inspection (NII) area of the port. And, a second scenario, when the inspection is carried in a specific area of the container terminal yard. In this scenario the container terminal manages the resources needed for the inspections and assign the dates and hours for those inspections. The Coordination Inspection Service must receive copy of all the messages interchanged.

- In this version, the **Positioning Coordinator Service** (SCPP from the Spanish “Servicio de Coordinación de Posicionamientos”) is the party that manages the resources needed for the inspections and assign the dates and hours for those inspections. Initially, the inspections at the container yard will be managed by the terminal operators and the SCPP will receive copy of all the documentary interchanges associated to the inspection.
- For this message, it only will be allowed cancellations and original functions. For every change, first it will be necessary to cancel the previous message and after send a new original (BGM at header level).
- It has been included a new reference for identifying groups of containers that have to be inspected together. New code “AST” in DE1153 (RFF in group 1).
- It has been included an explanation on the usage of the Ship’s Stay Reference when the equipment inspected will be transhipped (RFF in group 4).
- It has been included a new code for identifying the Customs document related to this inspection. New code “ABT” in DE1153 (RFF in group 4).
- It has been included a new repetition of segment LOC in group 4 for identifying the place where the inspection will be executed. New code “229” in DE3027 (LOC in group 4).

GENERAL INTRODUCTION

FORMAL DEFINITION

COHAOR: “Order to perform a specified special handling and/or service on containers. This message is part of a total set of container-related messages. These messages serve to facilitate the intermodal handling of containers by streamlining the information exchange. The business scenario for the container messages is clarified in a separate document, called: 'Guide to the scenario of EDIFACT container messages'.”

The ‘Guide to the scenario of the EDIFACT container messages’ has been published by ITIGG under the title “Guide to the UN/EDIFACT Container Messages” (Document reference JM4/ITIGG/96.103/v.12).

CLARIFICATION

The COHAOR message is an order to perform specified special handling and/or services on items of transport equipment.

It is intended to be used in conjunction with a release order message - either a COPARN (empty container release) or COREOR (full container release) - in which case it would usually follow the release order, where the container in question had already been identified.

The COHAOR message contains more detailed specific instructions for special handling and/or servicing of the container.

UN/EDIFACT DIRECTORY REFERENCE

This document is based on the UN/EDIFACT D00B directory.

CHOREOGRAPHY

This message could be interchanged in two different scenarios. The first one is a scenario where the Positioning Coordinator Service (SCPP) manages the resources needed for the inspections and assigns the dates and hours for those inspections. That happens when the inspection is executed at the Border Inspection Post (BIP or PIF in Spanish) or when it is realized at the Non Intrusive Inspection (NII) area of the port.

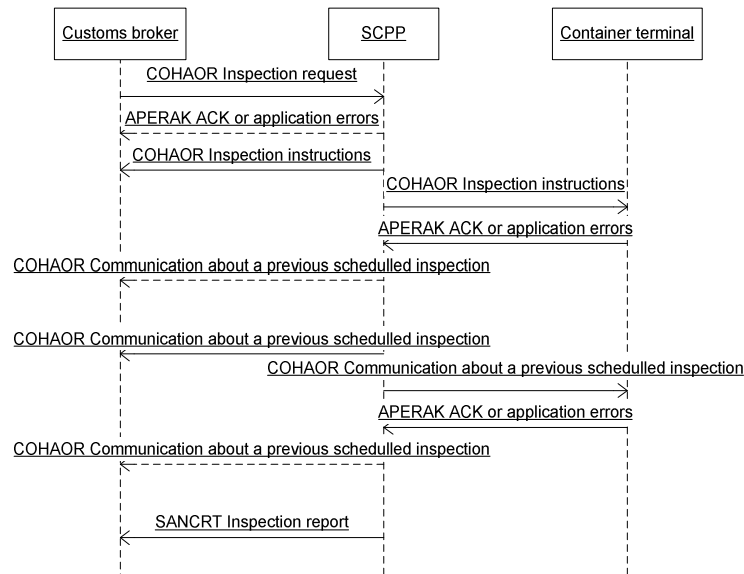

Fig. 1 Inspection at the Border Inspection Post or at the Non Intrusive Inspection area

In this scenario, the customs broker request for an inspection to the SCPP (COHAOR message with code “292” at DE1001) and the SCPP assigns some resources and a date for the inspection (COHAOR message with code “845” at DE1001). If some formal errors are detected, an APERAK message will be send, instead of the COHAOR message (this APERAK message is detailed on the ESMT – inbound and outbound land- procedure). A copy of this message is sent to the container terminal (COHAOR message with code “845” at DE1001) that can acknowledge the reception of this message or can answer with an error response if the container will not be at the terminal at the specified date (APERAK message).

If the container terminal rejects the informative message received, the SCPP can modify the scheduled date and propose a new one. The SCPP will send a message to the customs broker proposing a new date (1st use of the COHAOR message with code “846” at DE1001). After that, the new date has to be communicated to the container terminal and the answer could be in the same way that has been described before.

If the SCPP knows that the resources will not be available at the given date, the SCPP will send a message to the customs broker proposing a new date (2nd use of the COHAOR message with code “846” at DE1001) and must also send a copy to the container terminal (COHAOR message with code “846” at DE1001).

Sometimes the SCPP knows that the received information has some mistakes that can be solved replacing the information received by the correct one and the SCPP can update in its system the information received and can send a message to the customs broker with the information present in its system (3rd use of the COHAOR message with code “846” at DE1001) and must also send a copy to the container terminal (COHAOR message with code “846” at DE1001).

When the inspection has finalized, a message will be sent from the SCPP to the custom broker notifying this event (SANCRT message).

The second scenario is when the inspection will be executed at the container terminal yard. In this scenario the container terminal manages the necessary resources for the inspections and assigns dates and hours for those inspections. The Coordination Inspection Service must receive copy of all the interchanged messages. In this scenario, the customs broker requests for an inspection to the shipping agent (COHAOR message with code “292” at DE1001) and the shipping agent relays this message to the container terminal and the SCPP (COHAOR message with code “292” at DE1001). The customs broker must also send a copy of this message to the SCPP (COHAOR message with code “292” at DE1001).

The container terminal assigns some resources and sends a message to the shipping agent with the date for the inspection (COHAOR message with code “845” at DE1001). It may not accept the request for inspection when the container will not be at the terminal (COHAOR message with code “845” at DE1001 and code “27” at DE1225). The shipping agent must send a copy of this message to the customs broker (COHAOR message with code “845” at DE1001) and he also must send a copy to the SCPP (COHAOR message with code “845” at DE1001).

The custom broker, the shipping agent and the container terminal can agree the possibility of a direct communication from the customs broker to the container terminal. In this scenario, the shipping agent will be informed of the operations requested by the custom brokers.

When the container terminal knows that, at the given date, the container will not be positioned at the inspection area, it must send a message to the customs broker proposing a new date (COHAOR message with code “846” at DE1001) and must also sent a copy to the SCPP (COHAOR message with code “846” at DE1001).

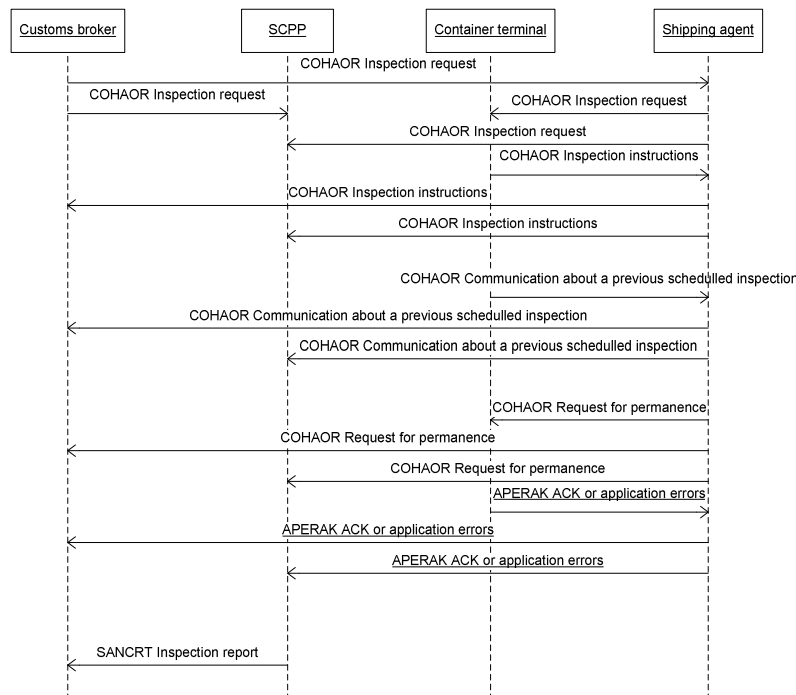

Fig. 2 Inspection at a specific area of the container terminal

For a positioned container, if it has not been possible to inspect during the day, the shipping agent can request for the permanence of the container at the inspection area (COHAOR message with code “847” at DE1001). The container terminal may acknowledge the reception of this message or may reject this operation when it will not have the resources for doing it (APERAK message).

When the inspection has finalized, a message will be sent from the SCPP to the custom broker notifying the event (SANCRT message).

STATUS INDICATORS AND USAGE INDICATORS

Status Indicators

Status Indicators (M and C) form part of the UN/EDIFACT standard and indicate a minimum requirement to fulfil the needs of the message structure.

The Status Indicators are:-

<i>Value</i>	<i>Description</i>
M	Mandatory This entity must appear in all messages. Shown as Usage Indicator "M" in Implementation Guidelines.
C	Conditional This entity is used by agreement between the parties to the transaction.

A 'Conditional' Status Indicator may be represented by a supporting Usage Indicator which is either R, O, D or X (see below)

Usage Indicators

Throughout this document reference is made to indicators (M, R, D, O and X) which are shown adjacent to data items and which dictate for the particular message or set thereof the agreed usage of the data items or entities.

Set out below are the indicators and their respective uses:-

<i>Value</i>	<i>Description</i>
M	Mandatory Indicates that this item is mandatory in the message.
R	Required Indicates that this entity must be sent in this implementation.
D	Dependent Indicates that the use of the entity depends upon a well-defined condition or set of conditions. These conditions must be clearly specified in the relevant implementation guideline.
O	Optional Indicates that this entity is at the need or discretion of the sender of the message.
X	Not Used

Indicates that the entity is not to be used in this message implementation.

Where an element within a composite is marked “M” or “R”, but the composite has been marked “O” or “D”, this indicates that the element must always be transmitted only if the composite is used.

Temporary codes

In this implementation there are used some codes that are not included in the UNCL. These are temporary codes. When those codes are used, they are between the “[“ and the “]” characters. For example, ABT is a valid code for DE1153 (according to UNCL) and [SOF] is a temporary code.

**SEGMENT TABLE**

0010	UNH	UNH Message header	M	1	Mandatory

R		203	CCYYMMDDHMM	

**R FTX FREE TEXT**

Segment Function: To provide free form or coded text information.

Message Level: Header

Segment Repeats: 9

Segment Status: Conditional

Segment Usage: Required

Sample Segments: FTX+CHG++C4+CONTAINER HAS CHANGED'
FTX+AEA++PX+PALLETIZED CARGO'
FTX+AEA+++HANDLE WITH CARE'
FTX+PAC++DR+64'

Clarification: Comments.
Code or clear text indication of the type of change with respect to the earlier sent message.

One occurrence of this segment is required (type and number of packages) and three are optional (change information, cargo remarks and comments).

M	4451	TEXT SUBJECT QUALIFIER	M	an..3
D		AEA Cargo remarks		
D		AFB Comment		
D		CHG Change information		
R		PAC Packing/marketing information		
		Information regarding the packaging and/or marking of goods.		
		It will be used to describe the type and number of packages.		

X	4453	TEXT FUNCTION, CODED	C	an..3
---	------	----------------------	---	-------

D	C107	TEXT REFERENCE	C	
M	4441	Free text, coded	M	an..17

		When 4451 is "AEA":		
O		PX For operational purposes, only when cargo is palletized it must be used this data element with "AEA" in DE4451.		
		When 4451 is "CHG":		
D		[C1] Message level information changed		
D		[C2] Message level information added		
D		[C3] Message level information deleted		
D		[C4] Container information changed		
D		[C5] Container(s) added		
D		[C6] Container(s) deleted		
R		When 4451 is "PAC":		
		Use UN/ECE Recommendation number 21 (2 alpha code), e.g. "SA" Sack.		
X		When 4451 is "AFB" this data element will not be included.		

X	1131	Code list qualifier	C	an..17
X	3055	Code list responsible agency, coded	C	an..3

D	C108	TEXT LITERAL	C	
M	4440	Free text	M	an..512

M		When 4451 is "AEA":		
		General remarks referred to the container cargo, other than when the cargo is palletized.		
O		When 4451 is "PAC":		
		Number of packages in the container.		
O		When 4451 is "AFB":		
		In the "Inspection instructions message" or the "Communication about a previous scheduled inspection message" from scenarios 1 and 2, and in the "rejection message" defined in scenario 2 it is possible to include some comments.

**M SEGMENT GROUP 1 - RFF**

Group Function:	A group of segments to specify references relating to the whole message.
Group Repeats:	9
Group Status:	Conditional
Group Usage:	Dependent
Clarification:	<i>The RFF Group should be used in the case of changes to information transmitted in a previous message.</i>

D RFF REFERENCE

Segment Function:	To specify a reference.
Message Level:	Group 1
Segment Repeats:	1
Segment Status:	Mandatory
Segment Usage:	Mandatory
Sample Segment:	RFF+ACW:002408000021'
Clarification:	To specify references applicable to the whole message, such as the previous message reference. <i>One occurrence of this segment is required (reference to a previous message) when the function of the message is other than "original" or when the message name is other than "inspection request". There are two more optional occurrences for the freight forwarder's reference and a reference to identify a group of containers that have to be inspected together.</i>

M	C506	REFERENCE	M
M	1153	Reference qualifier	M an..3
D		ACW	Reference to a previous message Must be used when the document/message name (DE1001 in segment BGM) is other than "292" and the message function (DE1225 in segment 2005) is other than Original (e.g. in case of a replacement message). In both situations, a reference to the previous message has to be sent in the data element 1154 of this segment and the reference has to be the document/message number (DE1004 in segment BGM of the previous message).
D		FF	Freight forwarder's reference number Freight forwarder's reference for this consignment.
D		AST	Group reference number When several containers have to be inspected together, it must be declared the number that identifies these group of containers.
R	1154	Reference number	C an..35
R			Number. When the SPCP has received the request for an inspection manually (in a paper form, because the sender was not able to send an EDI message) this number will start with the string "MANUAL".
D	1156	Line number	C an..6
D			When several containers have to be inspected together, it must be declared the total number of containers (only when del153 is "AST")
X	4000	Reference version number	C an..35

**M SEGMENT GROUP 2 - NAD**

Group Function: A group of segments to identify a party and/or addresses and related contacts.

Group Repeats: 9

Group Status: Mandatory

Group Usage: Mandatory

Clarification: *This segment group is mandatory in the message and must always be used.*

M NAD NAME AND ADDRESS

Segment Function: To specify the name/address and their related function, either by CO82 only and/or unstructured by CO58 or structured by CO80 thru 3207.

Message Level: Group 2

Segment Repeats: 1

Segment Status: Mandatory

Segment Usage: Mandatory

Sample Segment: NAD+MS+B08987654+CONSIGNATARIO_A'

Clarification: The NAD segment at this level must always be sent. It identifies parties associated with the equipment release(s) transmitted in the message.

Three occurrences of this segment are required for containerized cargo (message sender, shipping agent and invoicee). For break bulk cargo, shipping agent will be optional.

There are two possibilities for declaring party details: use only the C058 composite or the composites C080 (name) and C059 (street) and the data elements 3164 (city name), 3229 (country sub-entity), 3251 (postcode) and 3207 (country, coded). In this implementation, it is recommended the second alternative

M	3035	PARTY QUALIFIER	M an..3
R		MS Message Sender	
D		CN Consignee (in this message implementation guidelines, this code is used for the shipping agent details). Mandatory for containerized cargo.	
R		IV Invoicee (must be sent where the message sender differs from the invoicee)	
D	C082	PARTY IDENTIFICATION DETAILS	C
M	3039	Party id. identification	M an..35
R		NIF/CIF

O	3036	Party name	C an..35
O	3036	Party name	C an..35
O	3036	Party name	C an..35

O	3036	Party name	C an..35
O	3045	Party name format, coded	C an..3
D	C059	STREET	C
M	3042	Street and number/p.o. box	M an..35
O	3042	Street and number/p.o. box	C an..35
O	3042	Street and number/p.o. box	C an..35
O	3164	CITY NAME	C an..35
O	3229	COUNTRY SUB-ENTITY IDENTIFICATION	C an..9
O	3251	POSTCODE IDENTIFICATION	C an..9
O	3207	COUNTRY, CODED	C an..3

**R SEGMENT GROUP 4 – EQD**

Group Function:	A group to specify the containers to be released.
Group Repeats:	999
Group Status:	Mandatory
Group Usage:	Mandatory
Clarification:	<i>The EQD Group must always be transmitted. Only one occurrence of this group will be sent.</i>

M EQD EQUIPMENT DETAILS

Segment Function:	To identify a unit of equipment.
Message Level:	Group 4
Segment Repeats:	1
Segment Status:	Mandatory
Segment Usage:	Mandatory
Sample Segments:	EQD+CN+RRRU1234560:55+45R1' (for container cargo) EQD+BB+BULK12300' (for break bulk cargo)
Clarification:	To specify container or equipment details. <i>The EQD segment must always be sent.</i>

M	8053	EQUIPMENT QUALIFIER	M an..3
D		CN Container	
D		BB Break bulk	
R	C237	EQUIPMENT IDENTIFICATION	C
R	8260	Equipment identification number	C an..17
D		Equipment Number	
		Container numbers must include both prefix and number, expressed as a contiguous string without spaces or hyphens.	
D		Break bulk identification	
		For break bulk cargo it must be used the following string: "BULK" plus the weight of the goods item expressed in Kgr., as a contiguous string without spaces or hyphens. E.g. "BULK25" when its weight is 25 Kgr. and "BULK1200" if its weight is 1,200 Kgr.	
D	1131	Code list qualifier	C an..3
D		55 Quality conformance	
		Use this code when the equipment identification number is ISO6346 compliant and the control digit is calculated according to this standard. Otherwise, skip this data element.	
X	3055	Code list responsible agency, coded	C an..3
X	3207	Country, coded	C an..3
D	C224	EQUIPMENT SIZE AND TYPE	C
D		ISO6346 code for size and type	
		Use this code when it is containerized cargo.	
R	8155	Equipment size and type identification	C an..10
R		Equipment Size and type	
		Container size and type according to ISO6346 codes.

**D SEGMENT GROUP 11 - TMP**

Group Function:	A segment group to identify transport related temperature settings.
Group Repeats:	9
Group Status:	Conditional
Group Usage:	Dependent
Clarification:	<i>When controlled temperature goods are stored in the container, an occurrence of this group has to be used.</i>

M TMP TEMPERATURE

Segment Function:	A segment to specify the type of transport related temperature such as storage, transport or operating temperature and also to optionally specify a single value temperature setting.
Message Level:	Group 11
Segment Repeats:	1
Segment Status:	Mandatory
Segment Usage:	Mandatory
Sample Segment:	TMP+2+-21.0:CEL'
Clarification:	To specify temperature settings for the container. <i>The TMP segment must be used when segment group 11 is used.</i>

R	6245	TEMPERATURE QUALIFIER	M	an..3
R		2 Transport temperature		
O	C239	TEMPERATURE SETTING	C	
R	6246	Temperature setting	C	n3
R		Temperature setting of the container.		
O	6411	Measure Unit qualifier	C	an..3
D		CEL Celsius		
D		FAH Degree Fahrenheit		

O RNG RANGE DETAILS

Segment Function: To specify a range.

Message Level: Group 11

Segment Repeats: 1

Segment Status: Conditional

Segment Usage: Optional

Sample Segment: RNG+5+CEL:2:6'

Clarification: The RNG segment may be used if a range of temperatures is to be specified. It should always be used in conjunction with the preceding TMP segment.

M	6167	RANGE	TYPE	QUALIFIER	M	an..3
M			5	Temperature Range		
R	C280	RANGE			C	
M	6411	Measure	unit	qualifier	M	an..3
D			CEL	Celsius		
D			FAH	Fahrenheit		
R	6162	Range	Minimum		C	n..18
R			Lowest	temperature		
R	6152	Range	Maximum		C	n..18
R			Highest	temperature		

O CNT CONTROL TOTAL

Segment Function: To provide control total.

Message Level: Header

Segment Repeats: 1

Segment Status: Conditional

Segment Usage: Optional

Sample Segment: CNT+11:125'

Clarification: The CNT segment will be used when the total number of packages contained on a container/means of transport would have to be declared.

M	C210	CONTROL		M	1
M	6069	Control	total type code qualifier	M	an..3
M			11 Total number of packages		
M	6066	Control	total value	M	n..18
M			Total number of packages		
X	6411	Measurement	unit code	C	an..3

M UNT MESSAGE TRAILER

Segment Function: To end and check the completeness of a message.

Message Level: Summary

Segment Repeats: 1

Segment Status: Mandatory

Segment Usage: Mandatory

Sample Segment: UNT+28+002408123456'

Clarification: *The UNT must always be sent.*

M	0074	NUMBER OF SEGMENTS IN A MESSAGE	M n..6
R		<i>Number of segments in the message including UNH and UNT.</i>	

M	0062	MESSAGE REFERENCE NUMBER	M an..14
R		<i>Same reference as in 0062 in UNH.</i>
