2 Technical characteristics of the Port

This chapter contains a physical description of the Port of Barcelona; its geographic location and climatic conditions, its land accesses, the location of lighthouses and beacons which facilitate maritime access, the distribution by use of the port's 828.9 ha of land (including the ZAL) and the draught along the more than 20 km of wharves.

Finally, this chapter contains an inventory of the facilities and equipment in the Port.

INTRODUCTION

2.1. General conditions

2.1.1. Location

2.1.2. Wind pattern

2.1.3. Deep-water or theoretical storm pattern

2.1.4. Tides

2.1.5. Entrance

2.1.5.1. Access channel

2.1.5.1. bis Map of access channels and anchorage areas

2.1.5.2. Entrance mouth

2.1.5.3. Use of tugs for vessels entering and departing

2.1.5.4. Largest vessel entered in the last five years

2.1.6. Flotation areas (Ha)

2.1.6.1. Zone 1

2.1.6.2. Zone 2

2.2. Facilities for maritime trade

2.2.1. Wharves and berths

2.2.1.1. Classification by basin

2.2.1.2. Classification by use and draught

2.2.2. Land area and storage facility areas (m2)

2.2.3. Refrigerated warehouses and ice factories

2.2.4. Passenger terminals

2.2.5. Fishing facilities

2.2.6. Buildings and facilities for public use

2.4. Ships' facilities

2.4.1. Seawalls

2.4.1.1. Dry docks

2.4.1.2. Floating docks

2.4.2. Slipways

2.4.3. Shipyards

2.4.4. Ships' supply service

2.5. Dockside cargo-handling equipment

2.5.1. Cranes

2.5.1.1. Dock cranes

2.5.1.2. Mobile cranes

2.5.1.3. Number of cranes. Summary

2.5.2. Special loading and unloading facilities

2.5.3. Rolling stock

2.5.4. Auxiliary loading, discharge and transport equipment

2.6. Floating equipment

2.6.1. Dredgers

2.6.2. Tugboats

2.6.3. Sludge lighters, lighters and barges

2.6.4. Floating cranes

2.6.5. Other auxiliary service equipment

2.7. Land accesses and communications

2.7.1. Land accesses and internal communications

2.7.2. Map of internal communications

2.7.3. Map of land accesses

2.8. Brief description of facilities for specific traffic types

2.9. General map of lights and beacons

2.10. General map of Port

2 Technical characteristics of the Port

2.1. General conditions

2.1.1. Location

Longitude	2° 10' E
Latitude	41° 21' N

2.1.2. Wind pattern

Prevailing	3rd Quadrant
Dominant	1st. Quadrant

2.1.3. Deep-water or theoretical storm pattern

Length	300'
Maximum wave height (2h = Hs)	5
Maximum wave length (2L)	207
Significant wave	2,5

2.1.4. Tides

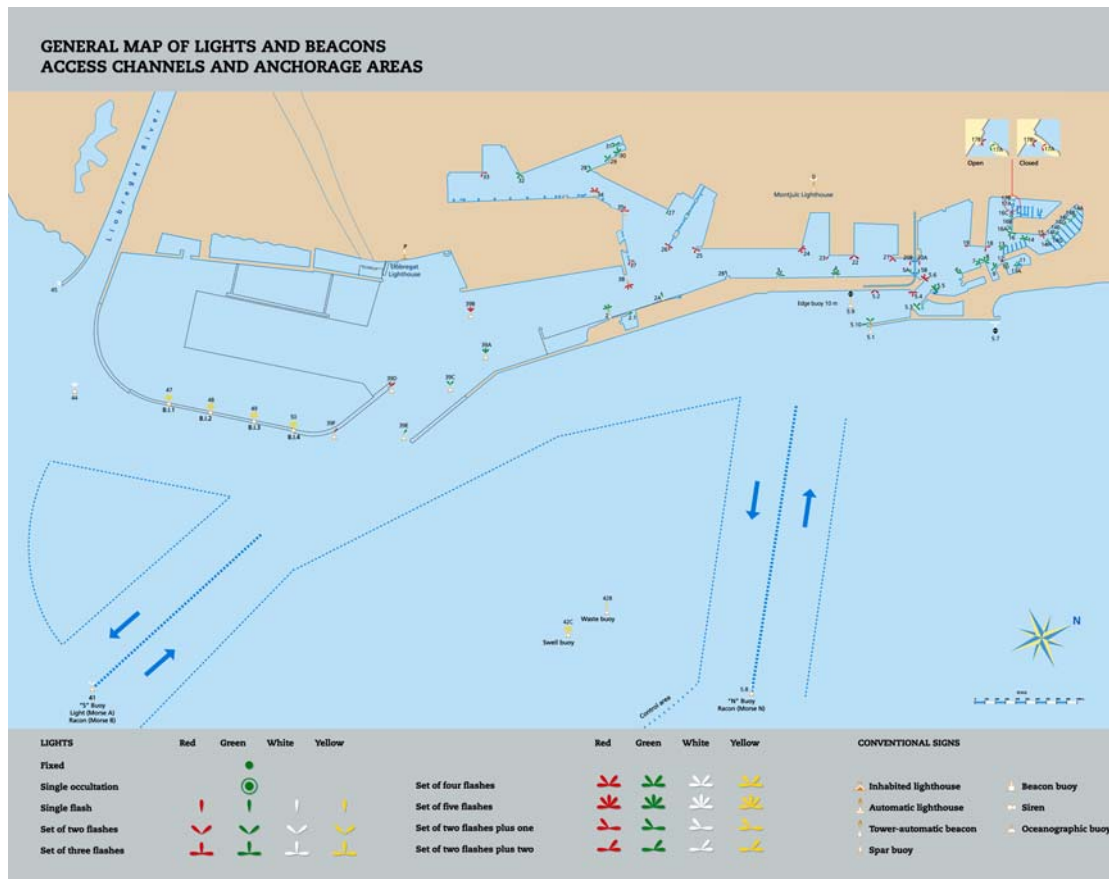

Maximum tidal range	125 cm
Height of LLW with respect to port zero mark	-5 cm
Height of HHW with respect to port zero mark	120 cm

2.1.5. Entrance

2.1.5.1. Access channel

North entrance channel	
Position	125° / 305° v
Width	0.5'
Longitude	1.5'
Water depth in LLW	30 m
Sea bottom characteristics	mud
South entrance channel	
Position	166° / 346° v
Width	from 0.5' to 0.6
Longitude	1.2'
Water depth in LLW	50 m
Sea bottom characteristics	mud

2.1.5.1. bis Map of access chanel and anchorage areas

2.1.5.2. Entrance mouth

North entrance mouth	
Position	015° / 195° v
Width	0.15'
Water depth in LLW	11.50 m
Maximum recorded current	1 cm/sec
South entrance mouth (works underway)	
Position	166° / 346° v
Width	0.3'
Water depth in LLW	18.5 m
Maximum recorded current	8 cm/sec

NB: The enlargement of the port of Barcelona to the south has created a channel between the current South entrance mouth and the access channel marked with beacons to indicate the navigable waters delimiting the filling works for the port's future breakwaters.

2.1.5.3. Use of tugs for vessels entering and departing

2.1.5. Entrances

2.1.5.4. Largest vessel entered in the last five years

Characteristics	Greatest length		Greatest depth at water level

2.7. Land accesses and communications

2.7.1. Land accesses and internal communications

Internal communications

Road

A 13km. long ring road connects the different wharves and storage areas around the perimeter of the Port of Barcelona. This road has two lanes in each direction around most of its length.

Apart from the peripheral ring network there are also access and service lanes to each wharf, but they are secondary to the main ring road described above.

Railway

Internal rail communications. From the Ponent wharf to the south, all the wharves have rail access, either with Renfe gauge (1.668 m), or with the gauge of the Ferrocarrils de la Generalitat de Catalunya (1m) or a mixed variety.

The Port's rail network is 33.475 km long, 15.45 km of which are Iberian gauge, 5 km of the gauge employed by the Ferrocarrils de la Generalitat de Catalunya and 4.700 km of mixed gauge (Iberian-Ferrocarrils de la Generalitat de Catalunya) and 3.63 km of mixed gauge (Iberian-European).

Renfe serves many different types of traffic: containers, non-containerised general cargo, solid and liquid bulks.

The Ferrocarrils de la Generalitat serve the flow of potash that is embarked in Barcelona from the Contradic wharf.

The Sud wharf is equipped with a container rail terminal.

The automobile terminals each have their own rail terminal for cars.

The Príncep d'Espanya wharf has a public multipurpose rail terminal mainly dedicated to cars, metal products and containers.

Land accesses

Given that the ringroads that girth the city of Barcelona pass very close to the port, access to the road network is immediate.

The main roads are:

- The AP-2 motorway, which links up with the centre of the country, Aragon and the A-68 motorway to the north of Spain and the
- The AP-7 motorway, which links up to the south with the east coast and centre of Spain and to the north, with the French border and the European motorway network.
- The AP9 motorway, which links to the AP-7 at the French border via la Jonquera.
- The C-32 motorway, which links up with the south and east of the country.
- The C-58 motorway running to Sabadell, Terrassa and Manresa, which links up to the Llobregat axis and through the Cadí tunnel to France via Puigcerdà and the Pimorent tunnel.
- The C-31 motorway, which links up with the N II main road to the French border.
- The N II, to the west, centre and north of the country.
- The N C-17, with the French border via Puigcerdà.
- The N 150, to Sabadell, Terrassa and Manresa.
- The N 340, which links up to the south and east of the country.

Railway

The following railways link the port and its surround area with the rest of the country:

Renfe (Iberian gauge)

- To Portbou via Mataró and Granollers
- To Puigcerdà (France)
- To the centre, west and the north of the country via: Manresa-Lleida, Sant Vicenç-Lleida, Tarragona-Saragossa
- To the west, south and East coast via: Tarragona-Valencia

Ferrocarrils de la Generalitat de Catalunya

- To Manresa, Súria and Berga (metric gauge)
- To Igualada (metric gauge)
- To Sabadell and Terrassa

2.7.2. Map of internal communications

2.7.3. Map of land accesses

2.8. Brief description of facilities for specific traffic types

Containers and general cargo terminals

Loading for external navigation

In the 24 Sud Wharf is the public container terminal, which is a concession granted to TCB, SL. It covers an area of 46.1 hectares and has two berthing lines, one on the north face 350 m long and with a 12 m draught and another on the east face 1,012 m long with a draught of between 14 and 16 m. This terminal has 9 container lifting cranes, 5 of which are of the post-panamax type.

On 29 Príncipe d'Espanya wharf, the Terminal Catalunya, SA firm holds the concession for a multi-purpose terminal covering an area of 35.1 hectares, a berthing line of 1,653 m and a draught of between 8.7 and 14 m. The terminal has 2 ro-ro ramps and an area of 22,145 m² of covered warehouses. Likewise, the company owns 8 container lifting cranes, all of the post-panamax type.

On 01 Adossat and 20 Ponent - 21 Costa wharves, there are two multipurpose terminals run by UTE Unió Term. Est. LLEVANT T.M. Alcudia and Terminal Port-Nou, SA. respectively. Together, these terminals occupy an area of 15 has, with a draught of up to 16 m and a berthing line of 2,150 m. All in all, they have 7 ro-ro ramps and a covered warehouse area of 19,442 m². The UTE has 3 container lifting cranes and Terminal Port-Nou, SA and has another on the southern part of the Ponent Wharf.

Cargo in coastal shipping mode

Estibadora de Ponent, SA has two areas on 26 Álvarez de la Campa and 27 Lepant wharves (berths No. 2 and 3) for handling containers. This facility has two authorised areas, of 53,180 m² and 48,405 m² respectively, with draughts of between 6.5 m and 11.8 m and a berthing line of 870 m with three Ro-ro berths. It also has 1 28 Tn gantry crane and 4 container lifting cranes of 33.5 to 41 Tn. Apart from coastal traffic, this terminal also handles exterior traffic starting and ending in North Africa.

On 19 Sant Bertran wharf Tramediterránea SA has an area under concession of 34,995 m² for handling ro-ro traffic.

Automobile terminals

On 30 Dàrsena Sud and 31 Dàrsena Interior wharves there are the two automobile terminals: Autoterminal, SA and Setram SA. These wharves have a berthing line of 850 m, with a maximum draught of 12 m and four ro-ro berths.

Autoterminal has an area under concession of 29.2 Ha, with 3 multi-storey car storage areas, which has allowed it to increase its storage capacity by 299,340 m². The terminal has a capacity of 44,400 vehicles, of which 21,500 correspond to covered places and the remaining 22,900 in the open air. The terminal also has a vehicle personalisation centre and a protection-removing tunnel.

Setram operates an area under concession of 8.7 Ha and has a multi-storey parking area, which it shares with Autoterminal. This has allowed it to increase its storage area by 88,700 m². The terminal has a capacity for 10,000 vehicles, of which 4,000 correspond to covered places.

Bulk grain and seed terminal

22B Contradic Est wharf is home to the Ergransa terminal, specialised in the reception of bulk grains and seeds. It has multicellular silos with a capacity for up to 170,000 Tn. At the terminal there is a pneumatic discharge operational capacity of 900 Tn/h

Terminals for milling soya beans

26B Álvarez de la Campa and 22B Contradic West wharves are home to Cargill España, SA and Bunge Ibérica, SA (formerly Moyresa), specialised in the traffic of soyabeans. They have milling plants with a capacity of 1,400,000 Tn.

Bulk cement reception and loading terminal

On 22C Contradic, 26B Álvarez de la Campa and 01 Adossat wharves are the cement terminals, Portcemen SA and CEMEX SA. These terminals have silos with a storage capacity of 104,800 Tn.

Potash loading terminal

On 22A Contradic Nord wharf we can find Tramer SA, a terminal dedicated to the loading of potash. It has a maximum storage capacity of 80,000 Tn and is equipped with two gantry cranes with a capacity of between 700 and 700 Tn/hour.

Terminals for the loading, unloading and storage of liquids and liquefied gases

The Port of Barcelona houses the following specialised terminals in this segment of transit: Enagas, SA (natural gas), Relisa (oils), Tepsa (chemicals and refined petroleum), Terquimsa (liquid chemicals), Decal (refined petroleum), Meroil (refined petroleum), Sadesa (oils), Loiret & Haëntjens Esp., SA (molasses) and CLH, SA (refined petroleum). These terminals are located on 32 Inflamables, 22 Contradic wharves and on stretch 4 of the port Ringroad (circumval·lació). They occupy an area of 61.5 has with an exclusive berthing line of 2,390 2.390 m and have a draught of up to 12 m. Total storage capacity is 2,232,000 m³.

Fruit terminal

20C Ponent wharf houses the Terminal Port Nou, SA fruit terminal. It has 5,556 m² of refrigerated warehouse space, with three independent temperature controls, simultaneous storage of up to 6,000 pallets, computerised bar code control system and a loading platform that can accommodate up to 150 lorries per day.

Coffee and cocoa terminal

On 11,000 Álvarez de la Campa wharf is the BIT SA terminal. It covers an area of 11,000 m² and has a storage capacity for coffee and cocoa of 14,000 Tn. The terminal is under duty-free control and is type-approved by the LIFFE (London International Financial Futures and Options Exchange), necessary for the delivery and auctioning of coffee.

Non-ferrous metals terminal

29 Príncep d'Espanya wharf is home to the Barcelona Metals, SA non-ferrous metals terminal, specialised in the handling, storage and distribution of metals and their alloys: aluminium, copper, nickel, lead, tin and zinc. The terminal has been type approved by the London Metals Exchange (LME).

Cold storage facility

19 Sant Bertran Wharf houses Interlogística del Frío. The terminal has a cold storage facility for storing perishable products on a site covering 7,973 m² with 75,000 m³ capacity cold stores. It also has a freezing tunnel and is type approved for intra-Community storage.

2.10. General map of Port

3 Authorised private-sector construction works and activities

Although the land itself is owned by the public sector, most of this is leased out through a number of legal deeds to private companies, which render port services. This chapter first contains a list of all the spaces, organised by wharf, which were leased out to private companies before the onset of 2006, with specific details as to size, functional use, the date on which authorisation was granted and the levy paid to the Barcelona Port Authority.

Following that there is a list of all the construction works and activities authorised in 2006.

INTRODUCTION

3.1. Authorised before 2006 and currently in force

3.2. Authorised in 2006

3 Authorised private-sector construction works and activities

4 Traffic statistics

This chapter contains an extensive description of the traffic of the Port of Barcelona. These statistics show movements of passengers, number of ships that have entered the port - classified according to size, flag and type - and the goods traffic in 2006. Note that point 4.7 contains specific information on containerised traffic and point 4.8 provides a summary of all of the traffic in the Port of Barcelona.

INTRODUCTION

4.1. Passenger statistics

4.1.1. Passengers

4.1.1.1. Number of passengers

4.1.1.2. Number of passengers on regular lines. Ports of origin y destination

4.1.2. Passenger vehicles. Number of units

4.2. Ships

4.2.1. Merchant vessels

4.2.1.1. Distribution by tonnage

4.2.1.2. Distribution by flags

4.2.1.3. Distribution type of vessel

4.2.2. Warships

4.2.3. Fishing vessels

4.2.4. Pleasure craft

4.2.5. Vessels entered for breaking

4.2.6. Other craft

4.3. Cargo, in tonnes

4.3.1. Handled by wharves and service berths

4.3.2. Handled on private wharves and berths

4.3.3. Unloaded and loaded during the year

4.3.4. Total cargo by nationality of ports of origin and destination

4.3.5. Transshipped cargo

4.3.6. Roll-on / Roll-off traffic

4.3.6.1 Summary of roll-on/roll-off traffic

4.3.6.2 Units of roll-on/roll-off intermodal (UTI) transport

4.3.6.3 Units of vehicles in cargo regime

4.3.7. Classification of cargo

4.3.7.1 Classification by type

4.3.7.2 Classification by type and presentation

4.3.7.3 Classification of goods in transit by type

4.3.7.4 Classification of goods by NST-2000

4.4. Local or river traffic, in tonnes

4.5. Ship supplies

4.6. Fish catches

4.7. Container traffic

4.7.1. 20-foot containers

4.7.2. Containers over 20 foot

4.7.3. Total containers of 20 foot and over

- 4.7.4. Total containers of 20 foot and over in transit
- 4.7.5. Total 20 foot equivalent containers (TEUS)
- 4.7.6. 20 foot equivalent containers (TEUS) in transit
- 4.7.7. Goods transported in containers classified by type, in tonnes

- 4.8. General summary of maritime traffic
 - 4.8.1. General table number 1
 - 4.8.2. General table number 2 (Including local traffic, supplies and fishing)
 - 4.8.3. General table number 3

- 4.9. Land traffic

5 Use of the Port

This chapter describes the activity at the Port of Barcelona during 2006 from a different perspective from that of the previous chapter. It offers data on the use of the many Port facilities, including the cargo loaded and unloaded on each wharf, the number of vessels entering dry dock and their tonnage, and the sum of the lengths of all vessels berthing at the Port in 2006.

INTRODUCTION

- 5.1. Use of wharves (t)**
- 5.2. Basins**
- 5.3. Pointed mooring**
- 5.4. Berths**
- 5.5. Area utilisation (t/day)**
- 5.6. Mechanical shore equipment.**
 - 5.6.1. Cranes**
- 5.7. Conveyor trucks**
- 5.8. Conveyor belts**
- 5.9. Mechanical shovels**
- 5.10. Railways shunting, locomotives**
- 5.11. Wagons**
- 5.12. Trucks**
- 5.13. Weighbridges**
- 5.14. Floating cranes**
- 5.15. Tugboats**
- 5.16. Slipways**
- 5.17. Description of terminals and wharfs**
- 5.18. Floating dock**
- 5.19. Barges**
- 5.20. Dry dock**

5 Use of the Port

5.1. Use of wharves (t)

6 Construction works

This chapter includes the investments in construction works that were partially or completely executed in 2006 by the Barcelona Port Authority. A description of the main projects is included.

The enlargement works of the Port of Barcelona have been co-financed by the European Union Cohesion Fund

INTRODUCTION

6.1. Works in progress or completed during the year

6.2. Brief description of the most important works

6.2. Brief description of the most important works

Order	PPE	APB	Title
1	7212OP014	OB-GP-P-0345/1999	SHEET PILE WHARF IN ÁLVAREZ DE LA CAMPA WHARF The reorganisation in areas under lease that has occurred over the last two years in the Alvarez de la Campa wharf has created the need to improve the berthing line of the wharf in order to adapt it to efficient port operation. As it is currently in a precarious situation (modules 14, 15, 16 and 17 have been taken out of service) and there are different draughts in that alignment, it has been necessary to build a new wharf to provide a uniform draught and allow port operations to take place. The work involves building 450 m. of sheetpile wharf to extend the current line by 1.5 m, providing a unified draught in the entire wharf of -12 m. It also includes the building of a track for the panamax crane to run right along the wharf, which is required by port operations.
2	7239OP002	OB-GP-P-0371/2001	PORT CONTROL TOWER A whole series of factors point to the advisability of setting up a port centre for traffic control and the coordination of vessel services. First of all, the increasingly complex nature of port traffic, due to a number of factors, such as continually increasing traffic or the opening of the second entrance mouth - which will provide two access channels to the port -, or the future enlargement works, which will significantly increase the length of the berthing lines and the water areas (area 1, anchorage areas, ...). Secondly, the building currently occupied by the pilots is in a precarious state, and is also affected by phase two of the enlargement of the Adossat wharf and the new uses planned for it, which means that the pilots need to be found new premises. This involves building the Control and Watch Tower of the Port of Barcelona with an annex for the Pilots Corporation and seafarers and the building of a parking area for 70 vehicles. The tower will be 46 m tall with 7 storeys, of which only the top three will be fitted out for control and port navigation purposes. The tower is to have a metal structure and the annex a concrete one. The project will include the necessary operational facilities.
3	7212OP004	OB-GP-M-0387/2001	MODIFICATION OF THE BUILDING PROJECT FOR THE EXTENSION OF THE EAST SEAWALL The current port was planned in the late sixties and early seventies, and its physical layout is very similar to that of the late eighties, which then handled some 18 million Tn. Therefore it should be noted that: Current traffic forecasts, which in 2000 were more than 30 million Tn, are way over the most optimistic figures of the 1989 Master Plan. The Port of Barcelona is currently clearly suffering from a lack of space, because of the delay in the execution of the works foreseen in the Master Plan, caused by the laborious administrative processes required by a project of this scale, and also the notable increase in traffic over the last few years, especially in containers, vehicles and tourist cruisers, a sector in which Barcelona is currently the leading port in the Mediterranean. The project consists of the construction of a sloping seawall 1 986 m long with a type section, subsequent to prior dredging of 3m, made up of solid concrete blocks of 50 Tn, resting on which successive layers of rockpile with an emerging wall of solid concrete crowned at a height of +12.00.
4	7212OP005	OB-GP-M-0388/2001	MODIFICATION OF THE BUILDING PROJECT FOR THE ENLARGEMENT OF THE SOUTH SEAWALL STRETCHES 1 AND 2 The current port was planned in the late sixties and early seventies, and its physical layout is very similar to that of the late eighties, which then handled some 18 million Tn. Therefore it should be noted that: Current traffic forecasts, which in 2000 were more than 30 million Tn, are way over the most optimistic figures of the 1989 Master Plan. The Port of Barcelona is currently clearly suffering from a lack of space, because of the delay in the execution of the works foreseen in the Master Plan, caused by the laborious administrative processes required by a project of this scale, and also the notable increase in traffic over the last few years, especially in containers, vehicles and tourist cruisers, a sector in which Barcelona is currently the leading port in the Mediterranean. The project consists of the construction of a seawall with a total length of 3 700 m, divided into two stretches: Stretch 1 is a sloping seawall 2 000 m long, made up of solid concrete blocks of up to 60 tonnes, resting on successive layers of rockpile with an emerging wall of solid concrete and crowned with an emerging solid concrete wall. Stretch 2 is vertical seawall 1 700 m long made up concrete caissons measuring 35 x 24 x 17m. These caissons rest upon on a banked stone rockpile, after prior dredging of the area, with an emerging wall of reinforced concrete. The project also includes the building of enclosures annexed to the South Seawall, covering an area of 50 Ha, achieved by building a breakwater parallel to the coast and closures perpendicular to it, made up of rockpile, making it possible to fill with material.
5	7212OP010	OB-GP-P-0389/2001	ENLARGEMENT OF THE SOUTH SEAWALL STRETCH 3

Order	PPE	APB	Title
			The current port was planned in the late sixties and early seventies, and its physical layout is very similar to that of the late eighties, which then handled some 18 million Tn. Therefore it should be noted that: Current traffic forecasts, which in 2000 were more than 30 million Tn, are way over the most optimistic figures of the 1989 Master Plan. The Port of Barcelona is currently clearly suffering from a lack of space, because of the delay in the execution of the works foreseen in the Master Plan, caused by the laborious administrative processes required by a project of this scale, and also the notable increase in traffic over the last few years, especially in containers, vehicles and tourist cruisers, a sector in which Barcelona is currently the leading port in the Mediterranean. This consists of the construction of a sloping breakwater with a total length of 1 126 m corresponding to the end of the South Seawall, with a curved line, followed by a straight stretch and a hammer-shaped end perpendicular to this. It is made up of 40-Tn solid concrete blocks in its outer layer, resting on successive layers of rockpile with an emerging wall of solid concrete crowned at a height of +11.00.
6	7239OP003	OB-GP-M2-0397/2001	MODIFICATION 2 OF THE REDEVELOPMENT OF THE MONTJUÏC LIGHTHOUSE As a result of the need for greater space for the Port Community, we envisage using the previously redeveloped Montjuïc Lighthouse facilities for use as the PC's headquarters and the place for it to perform its activities. This would involve enlarging and reshaping the lighthouse building, including reinforcing the foundations of the building, improving the structure, and adapting the new offices and services by creating a new basement floor.
7	7213OP004	OB-GP-P-0404/2001	PRAT WHARF Phase 1 The Port of Barcelona's urgent need for new areas for port uses means that a new container terminal must be built to meet existing demand. The planned works consist of the building of a wharf 1 000 m. long with a minimum 16 m. draught made up of reinforced concrete caissons. This work will make it possible to create an area of 81 Ha. This area includes the extrados of the wharf and the filling of some nearby areas.
8	7214OP005	OB-GP-P-0421/2001	REDEVELOPMENT OF THE COSTA WHARF These works have been planned to compensate the precarious situation of the wharfside, where potholes and subsidence have been caused by loss of filling materials and the insufficient resistance of the concrete blocks making up the wharf itself. The APB will build a new 460 m long wharf with 17 reinforced concrete caissons, located 100 m from the current wharf. Depending upon the existing leasehold, the company TERCAT will perform the rest of the work: landfilling, road surfacing, tracks for cranes and trasterainer, and lighting an signposting of the wharf.
9	7220OP014	OB-GP-P-0427/2001	RAIL LOOP IN OLD TIR AREA The Ministry of Public Works has planned to build the branch line into the Port of Barcelona directly from the terminal at CAN TUNIS. To do this, it is necessary to connect this branch both to the rail access to the South Wharf Sur and to the access to the Princep d'Espanya Wharf. This project comprises building a line 1 102.26 m long, of which 960 m correspond to track resting on concrete, and the rest on ballast. This will be a double gauge track (RENFE and European) with VIC-54 type tracks. It includes protection of level crossings using horizontal, vertical, light and sound S.L.A. signals, demolishing and rebuilding the fence marking out the leasehold and the replacement of the services affected.
10	7221OP000	OB-GP-P-0451/2003	DEFENCES OF THE TERRACE OF THE NORTH ENTRANCE MOUTH The building of a leisure and tourist area including a hotel means that special protection measures have to be taken to counteract the possible overshoot that could occur in the area east of the seawall. Furthermore, the storms that struck Barcelona in November 2001 showed that the overshoot of the seawall is higher than was originally envisaged in the planning stage and would need to be corrected if the area were used as described above. The work involved the building of a submerged berm which will extended the seawall 50 metres further out into the sea. This will thus dissipate a large amount of the energy of the breaking waves, virtually cancelling out the overshoot that could occur in the wave conditions originally contemplated in the design stage of the seawall.
11	7222OP024	OB-GP-P-0468/2004	ROAD ALONG THE PORT'S SEAWALL The construction of the Control Tower and the offices for pilots and sailors has generated the need for a new entrance road to handle the increased traffic. The road built is 1 300 m. long, with two lanes in each direction and is tarmac-covered. It also has pavements and service channels.
12	7222OP025	OB-GP-P-0469/2004	LANE DOUBLING ON CALLE 3

Order	PPE	APB	Title
			The opening of the new course of the River Llobregat in summer 2004 required a rethinking of the road accesses close to the Port, the ZAL and the Free Zone. These actions involved doubling the lanes on Calle 3 of the Free Zone Industrial Estate to allow access to the port from the Ronda Litoral ring road. The project, which is now almost completed, involved the building of an extra lane to allow traffic in both directions along Calle 3 of the Free Zone, thus increasing to six lanes, three towards the Port-Cinturón and three in the opposite direction; except for the Cinturón to the roundabout intersecting with Calle E, which is still a two-lane road. Horizontal and vertical signposting has also been put up, and adjustments made to the kerbs and other small actions in the intersections of the streets connecting along Calle 3.
13	7223OP049	OB-GP-P-0471/2004	REPLACING THE ANCHORAGE SYSTEM OF THE WOODEN PLATFORM ON THE RAMBLA DE MAR The walkway to the Espanya wharf was opened in 1995. The entire surface of this walkway is made up of laths of bolondo-type wood. For a number of reasons, the anchors that hold the laths in place have come loose over time and many of them are rickety. These problems need to be solved to protect pedestrians and improve the image of the walkway. The work involved changing the entire anchorage system of the laths, doubling the points at which the laths are supported along the walkway. Efforts have been made to recover as many of the laths as possible, with the necessary changes being made to adapt them to the new system of anchorage. Any laths that could not be reused were replaced by new ones similar to the current ones
14	7222OP028	OB-GP-P-0476/2004	ROAD ACCESS TO NORTH MEPSA Owing to the modification of the leaseholds of RELISA and ENAGAS, the current Calle A by the Inflammables is now an area under lease, and therefore a new road had to be built to allow access to the MEPSA leasehold. Two lanes 7 m. wide and 265 m long were built on both sides of the channel between the roundabout north of MEPSA and the main channel of the inflammables. The lanes will join up to the main road along the inflammables by means of a bridge between the current channel. The budget also includes the enclosure on the MEPSA ditch and all the services of water, light, drains, etc., as required.
15	7213OP013	OB-GP-P-0483/2004	PRAT WHARF Phase 2 The greater demand for container handling areas required the building of a second phase of the Prat wharf. This involves extending the Prat wharf by some 300 m to the south. The southernmost reaches of the extension coincide with the change in alignment of the wharves planned in the Organisation plan for the Enlargement docks.
16	7224OP013	OB-GP-P-0498/2004	URBAN DEVELOPMENT OF THE CRUISER TERMINAL The increase in large cruiser traffic berthing at the Adossat wharf has made it necessary to adapt the quayside to turn it into a cruiser terminal. This involves the urban development of approximately 1 360 m of the Adossat wharf from the North entrance mouth. The development works, very similar to the quality of the work carried out on the Sant Bertran and Barcelona wharves, involve building a central walkway and pavements, shelters in waiting areas and paving and fencing off of the apron. This also includes digging ditches for services, drainage, lighting, tree-planting, irrigation network, benches and signposting.
17	7123PP000	OB-GP-P-0504/2005	COASTAL CORRECTIVE MEASURES PHASE 3 C-2 (DISMANTLING PART OF THE BUNYOLA SEAWALL) The El Prat public beach shrank considerably during the winter of 2005, mainly in the northern area. Studies indicate that part of the problem could be due to the Bunyola seawall altering the normal coastal dynamics in the area, partly preventing sands from shifting southwards. The seawall was built by the port as part of the coastal corrective measures in 2001, and its initial purpose was to stabilise part of the beach to allow plovers to nest there. The fact that there is currently a large area of stable beach means that this seawall no longer fulfils this function, but distorts the dynamics of the coastline nevertheless. The seawall must therefore be shortened to resolve the problem of the natural contribution of sand onto the El Prat public beach. The works involved dismantling 180 m of the existing seawall, which altogether is 270 m long, 20.9 m wide on the crown, and has foundations with a maximum depth of around -5 although in the area close to the pierhead it does reach a depth of -9. The seawall is crowned with a layer of 3 Tn rockpile, and this crown must be dismantled to open up to the pierhead itself as work advances. Once the pierhead is reached, it will be dismantled (5 Tn rockpile) and the rockpile of the sloping walls will be taken down (this is made up of 3 Tn blocks to the north and 0.4 Tn to the south) at the same time as the quarry ballast in the centre of the seawall to reach the sand on which this centre rests.
18	7212OP029	OB-GP-P-0507/2005	FILLING OF PRAT WHARF - PHASES 1 AND 2 Now the berthing line of phases 1 and 2 of the Prat wharf has been completed, it is necessary to fill in the respective areas to create terraces for use by the future container terminal.

Order	PPE	APB	Title
			The area left by the berthing works of phases 1 and 2 of the Prat wharf will be filled using materials from two different sources: a) From the major infrastructure works currently underway in the city of Barcelona, and b) those from dredging operations in the entrance mouth and manoeuvring area of the new dock in the Port enlargement area. This project involves material from the second source mentioned. The dredging operation is due to provide 5.3 Million m3 of material.
19	7212OP030	OB-GP-P-0508/2005	CONSOLIDATION OF THE PRAT WHARF - PHASES 1 and 2 In view of the poor load-bearing capacity of the land in the port enlargement area, the terraces being built must be consolidated with hydraulic or some other type of filling methods before they can become operative. The terraces backing onto the berthing line of the Prat wharf will be consolidated using the pre-loading technique. Pre-loading will use slabs of 300 000 m3 of material up to a height of +9. The estimated time required by these pre-loading techniques is 6 months, although the pre-loading times will be determined by the instruments used to this end.
20	7219OP008	OB-GP-P-0520/2005	ADDITIONAL WORKS OF THE 2ND MOD. OF THE REDEVELOPMENT PROJECT OF THE MONTJUÏC LIGHTHOUSE The aim of this works project is to build a road connecting the Montjuïc Lighthouse to the urban road network. This road will be designed to allow car and coach traffic in both directions. It must therefore have two lanes 3.5 metres wide and plans should be studied for the inclusion of a hard shoulder with a pavement to enable pedestrian access. The maximum desirable slope of the stretch of road is calculated at 12%. Nonetheless, in certain specific stretches a gradient of up to 14% will be allowed. The minimum radius is set at 40 metres, bearing in mind that this is an urban project. Another facet of the Montjuïc Lighthouse redevelopment project is the need to improve accessibility, bearing in mind that the current access road is steep and winding, and also crosses a railway line at a level crossing with no barrier.
21	7214OP013	OB-GP-P-0524/2005	FITTING OUT OF THE LORRY PARKING AREA New land access are currently being planned for the enlargement area of the Port of Barcelona. The proposed new road system involves building a branch that will come off the Cinturón Litoral ringroad and run along the left bank of the river Llobregat to connect the ZAL and the south area of the Port. The additional traffic expected as a result justifies the need to provide this area with a provisional lorry park. It is therefore considered advisable to reserve and fit out an area of approximately 7 Ha. at the end of the old course of the river Llobregat. The aim of the work is to prepare an area of approximately 7 Ha. at the end of the old course of the river Llobregat as a provisional lorry parking area.
22	7212OP032	OB-GP-P-0526/2005	ADDITIONAL WORK ON PRAT WHARF PHASE 1. PRE-LOADING ENCLOSURE 3 The "Prat Wharf Phase 1" project includes dredging 2 800 000 m3 for the trench on which the caissons for building the wharf will be placed, and dredging 1 400 000 m3 from the "turning basin" area down to level -15. The approximately 1 000 000 m3 of dredged sand will be taken to the Prat beach and areas 3 and 4 will be filled with the remaining sand in order to build up the new areas that will make up the container terminal. These filled areas were to be consolidated by pre-loading with dredged materials from operations to take place in 2006. The project involves dredging 503 353.74 m3 in the turning basin area of the main project to level -16, and forming the containment walls in Enclosure 3 to contain the pre-loaded materials in this area. The materials used for building these walls will initially be dredged sand - 368 343.67 m3 in total - both for the main project and the filling of the additional enclosures, and 50 000 Tn of quarry ballast, which will be used to protect these mounds. The approximate area created for the pre-loading will be 100 000 m2 up to a height of 5.50 m.
23	7219OP010	OB-GP-P-0527/2005	PREPARATION OF ACCESSES TO THE SOUTHERN ENLARGEMENT AREA PHASE These works are justified for the following reasons: The access works of September 2004 were only designed to be very provisional and urgently need to be consolidated, as they are a risk to anyone entering the enlargement works area and the CIMAT facilities, a situation which has been pointed out on numerous occasions to the Site Manager. The planned works include the following actions: a) Consolidating the provisional access built in September 2004 b) Reinforcing and signposting the works access. c) Building an independent access for CIMAT and for the work offices. d) Building a direct access from the Calle 4 of the commercial port to the new terraces created next to the former river mouth to separate port traffic from works traffic. e) Repairing the roadway of the Polígono Pratense industrial estate affected by the works.
24	7212OP033	OB-GP-P-0529/2006	MOVEMENT OF PRE-LOADED MATERIALS - PHASE 1 - PRAT TERMINAL

Order	PPE	APB	Title
			The Prat terminal will be filled by hydraulic methods, which means that they must be compacted before the surfacing work takes place. Given that the terminal covers 93 Ha. it was decided for financial reasons to preload one area and to move this preloaded material in slabs of 300 000 m³. The aim of the project is to plan the pre-loading earthworks in the area of the spaces associated to the Prat wharf. The area concerned covers about 93 Hectares and will be filled with dredged sand.
25	7223OP051	OB-GP-P-0531/2006	FITTING OUT OF THE INSPECTION AREA
			As a result of the agreement struck between the public body Puertos del Estado and the Customs and Excise department of the State Treasury Administration on 11 March 2004 for the inspection of containers in the Port of Barcelona, it is now necessary to fit out a terrace covering about 8 000 m². The project has involved the creation of a circulation area, a scanner area and a 8 000 m² parking space in the lands between Gate 28 and the oil tanker pier, formerly occupied by the Can Tunis school. It includes a 20 cm thick layer of tarmac on top of artificial ballast. It also involves the following actions: Horizontal and vertical signposting; Level crossing protection; Channels for all the services; A drainage network with limber holes every 15 m and connection to the existing spillway; Supplying and fitting a fully equipped lighting tower. All the necessary channels are planned to provide all the services to the scanner control centre.
26	7291OP316	OB-GP-P-0535/2006	IMPROVING THE DRAUGHT IN THE SOUTH ACCESS TO THE INNER PORT
			The Port of Barcelona's enlargement works have moved the entrance mouth one mile south, which means that in some areas the draught and width of the navigation channel are very close to the limit, especially in the ships' exit path, where the vessels have to get close to the 12 m danger line. In addition to this, the draught of the ships operating in the port has gradually increased and some are now in excess of 13m. Taking into account the dynamic effect, this kind of ship can reach a total draught of 14m. That is why, as a safety measure for all ships, the Pilots' corporation and the Harbourmaster's office have urgently requested that Barcelona Port Authority dredge the access channel to the inner port down to level -14.50 m. The South access to the Inner Port has already ben dredged, leaving the channel at a variable depth between -17.0 and -19.0 m in the manoeuvring area, and the dredged material has been tipped into the enlargement areas and in the different pre-loading areas. The total volume dredged was around 2 124 043 m³, in an area covering 530 000 m. The type section of the dredged area slopes at an angle of 4H:1 V, except in the small trench opposite the inflammables, which will be 3H:1 V. There is funding earmarked for the digging of auxiliary mounds that will be necessary when the dredged materials are available as pre-loading material (crowning height +10.50 m). An ongoing suction dredger was used for this project.
27	7212OC001	OB-GP-P-0536/2006	ACCESSORY TO THE BUILDING OF THE PRAT WHARF PHASE 2 (Extrados riprap)
			To make the wharf safer in the event of seismic movements and bearing in mind the high percentage of fine materials in the filling, it has been decided to place a riprap bank in the extrados of the caissons of Phase 2 (minimum angle of internal friction - 40°). This is also recommended in the report by Puertos del Estado to remove any uncertainties since this operation is relatively inexpensive and highly effective. Construction a riprap bank with a minimum angle of internal friction of 40° in the extrados of the caissons of Prat Wharf Phase 2.
28	7223OC041	OB-GP-P-0544/2006	ADDITIONAL WORKS TO THE DOUBLING OF THE LANES IN CALLE 3
			The project covers the building of parking areas, moving the Information point and landscaping the roundabout and the traffic islands. The work comprised the building of three parking areas with a total of 202 places, distributed in 3 areas: area B-C, area C-D and area D-E. First it was necessary to demolish the current drainage system and remove the existing furniture and trees. A new drainage system has been built with a 250 mm collector and limber holes and the lamp posts have been moved to continue lighting this area. The road has been designed for category 4.2 type traffic and E1 type terraces. The road is surfaced with concrete reinforced with an electro-welded mesh.
29	7224OC001	OB-GP-P-0548/2006	ADDITIONAL WORKS ON THE PORT CONTROL TOWER
			After work had begun, in the light of talks with the Fire Chief of the City Council of Barcelona, it was decided to install an automatic sprinkler system in the top three storeys of the tower in addition to the original fire protection measures agreed previously, and a dry fire-fighting hydrant system from the foot of the tower to the upper floors. This project aims to define the installation of the following elements: fine sprinkler system and dry fire hydrant. The installation of these elements, and that of the smoke detection and extinguisher network already covered holes the original project will adequately define the fire protection system of the tower building.
