2 Technical characteristics of the Port

This chapter contains a physical description of the Port of Barcelona; its geographic location and climatic conditions, its land accesses, the location of lighthouses and beacons which facilitate maritime access, the distribution by use of the port's land (including the ZAL) and the draught along the wharves.

Finally, this chapter contains an inventory of the facilities and equipment in the Port.

INTRODUCTION

2.1. General conditions

2.1.1. Location

2.1.2. Wind pattern

2.1.3. Deep-water or theoretical storm pattern

2.1.4. Tides

2.1.5. Entrance

2.1.5.1. Access channel

2.1.5.1. bis Map of access channels and anchorage areas

2.1.5.2. Entrance mouth

2.1.5.3. Use of tugs for vessels entering and departing

2.1.5.4. Largest vessel entered in the last five years

2.1.6. Flotation areas (Ha)

2.1.6.1. Zone 1

2.1.6.2. Zone 2

2.2. Facilities for maritime trade

2.2.1. Wharves and berths

2.2.1.1. Classification by basin

2.2.1.2. Classification by use and draught

2.2.2. Land area and storage facility areas (m2)

2.2.3. Refrigerated warehouses and ice factories

2.2.4. Passenger terminals

Fishing facilities

2.2.6. Buildings and facilities for public use

2.4. Ships' facilities

2.4.1. Seawalls

2.4.1.1. Dry docks

2.4.1.2. Floating docks

2.4.2. Slipways

2.4.3. Shipyards

2.4.4. Ships' supply service

2.5. Dockside cargo-handling equipment

2.5.1. Cranes

2.5.1.1. Dock cranes

2.5.1.2. Mobile cranes

2.5.1.3. Number of cranes. Summary

2.5.2. Special loading and unloading facilities

2.5.3. Rolling stock

2.5.4. Auxiliary loading, discharge and transport equipment

2.6. Floating equipment

2.6.1. Dredgers

2.6.2. Tugboats

2.6.3. Sludge lighters, lighters and barges

2.6.4. Floating cranes

2.6.5. Other auxiliary service equipment

2.7. Land accesses and communications

2.7.1. Land accesses and internal communications

2.7.2. Map of internal communications

2.7.3. Map of land accesses

2.8. Brief description of facilities for specific traffic types

2.9. General map of lights and beacons

2.10. General map of Port

2 Technical characteristics of the Port

2.1. General conditions

2.1.1. Location

Longitude	2° 10' E
Latitude	41° 21' N

2.1.2. Wind pattern

Prevailing	3rd Quadrant
Dominant	1st. Quadrant

2.1.3. Deep-water or theoretical storm pattern

Length	300'
Maximum wave height (2h = Hs)	5
Maximum wave length (2L)	207
Significant wave	2,5

2.1.4. Tides

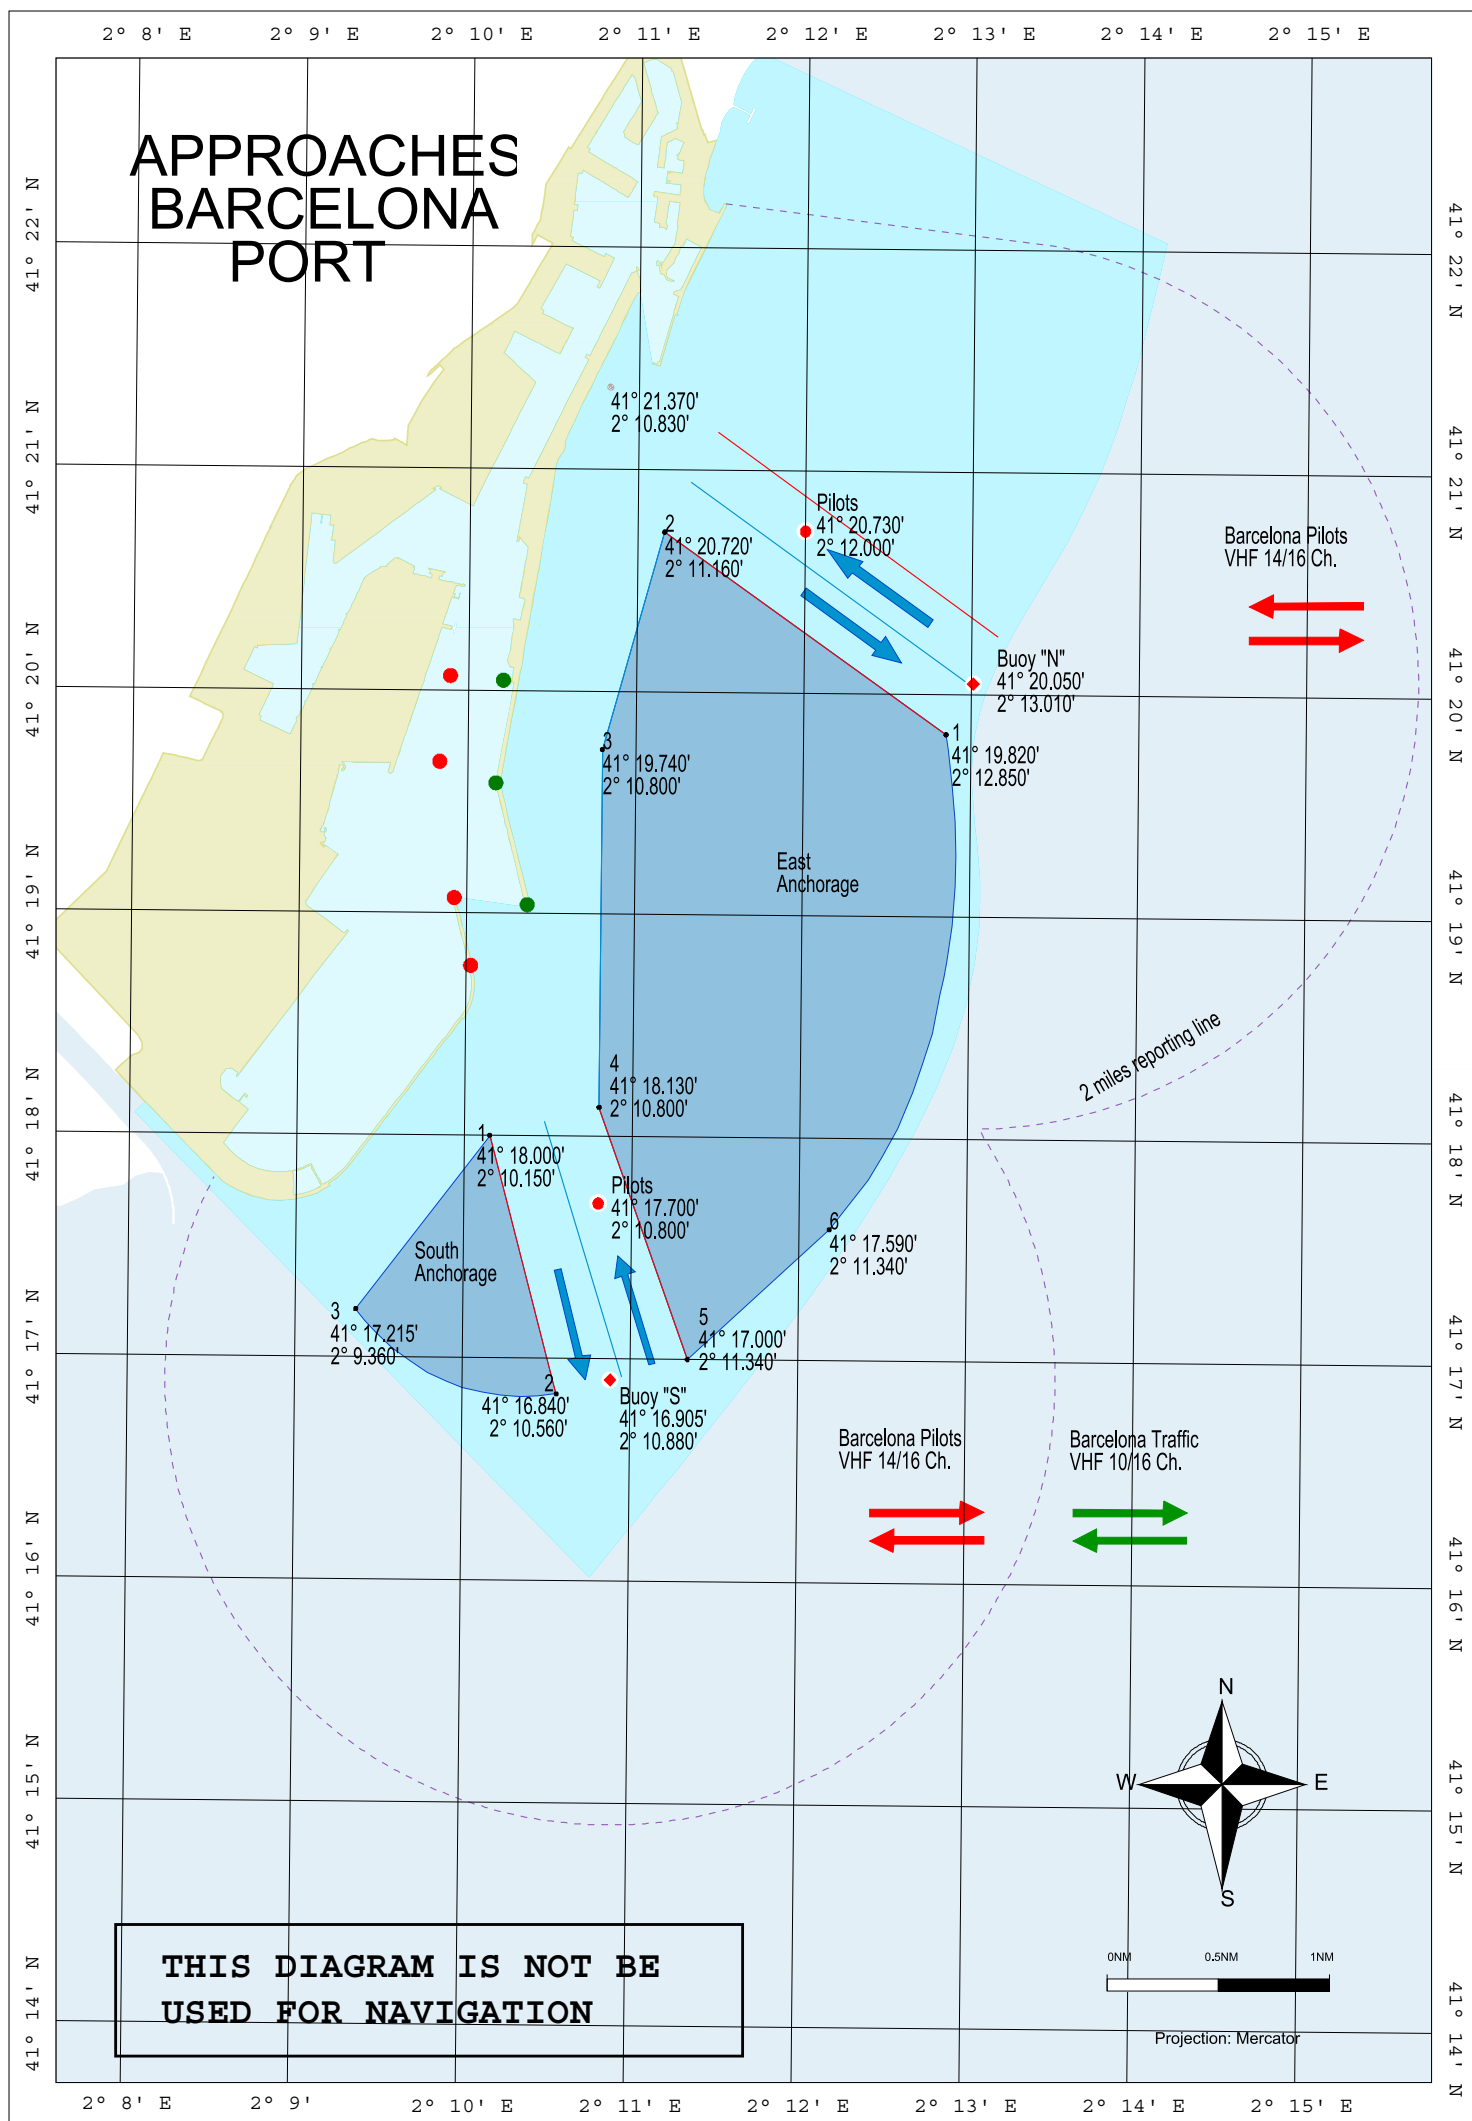

Maximum tidal range	125 cm
Height of LLW with respect to port zero mark	-5 cm
Height of HHW with respect to port zero mark	120 cm

2.1.5. Entrance

2.1.5.1. Access channel

North entrance channel	
Position	125° / 305° v
Width	926 m
Longitude	2,778 m
Water depth in LLW	30 m
Sea bottom characteristics	mud
South entrance channel	
Position	166° / 346° v
Width	de 926 a 1,111 m
Longitude	2,222 m
Water depth in LLW	50 m
Sea bottom characteristics	mud

2.1.5.1. bis Map of access channels and anchorage areas

2.1.5.2. Entrance mouth

North entrance mouth	
Position	015° / 195° v
Width	278 m
Water depth in LLW	11,50 m
Maximum recorded current	-
South entrance mouth (works underway)	
Position	166° / 346° v
Width	525 m
Water depth in LLW	18,5 m
Maximum recorded current	-

2.1.5.3. Use of tugs for vessels entering and departing

2.1.5. Entrances

2.1.5.4. Largest vessel entered in the last five years

Characteristics	Greatest length		Greatest depth at water level	
	Zone 1	Zone 2	Zone 1	Zone 2

2.7. Land accesses and communications

2.7.1. Land accesses and internal communications

Internal communications

Road

A 11 km-long ring road connects the various wharves and warehousing areas right around the perimeter of the Port of Barcelona. This road has two lanes in each direction along most of its length. Apart from the outlying network, there are access and service roads to each wharf, which are secondary to the main road described above.

Rail

As regards inland railway communications, from the Ponent wharf towards the south, all the wharves have rail access, either with RENFE gauge (1.668 m), Ferrocarrils de la Generalitat gauge (1m) or mixed gauge.

The port railway network is 32.546 km long, of which 7.59 km are Iberian gauge; 4.08 km of metric gauge; 2.152 km, mixed gauge (Iberian-metric), 16.15 km, mixed gauge (Iberian-European gauge) and 2.089 km mixed gauge (Iberian-European, metric). The rest are origin-destination lines.

RENFE provides service for a wide variety of traffic: containers, non-containerised general cargo, solid and liquid bulks.

Ferrocarrils de la Generalitat provides a service from the Contradic wharf to the flow of potash loaded in Barcelona.

The Sud wharf has a rail terminal for containers and the car terminals have their own rail terminal.

The Princep d'Espanya wharf has a public multi-purpose rail terminal mainly dedicated to cars, steel and containers.

Land accesses

The Port of Barcelona is located right next to a node of land transport infrastructures. This node comprises a network of railways and motorways connecting the port to its hinterland.

Barcelona's fast ring road, or 'Ronda Litoral', passes right next to the port as it goes around the city, providing immediate access to the road network.

The main routes are:

- The AP-2 motorway linking the city to the centre of Catalonia, Aragon and the A-68 to the north of Spain and French border via Irún.
- The AP-7 Mediterranean motorway linking us to the south, eastern coast and centre of Spain and north to the French border and the European motorway network.
- The AP-9 motorway connecting to the AP-7 at La Jonquera on the French border.
- The C-32 motorway linking to the south and eastern coast.

- The C-58 motorway to Sabadell, Terrassa and Manresa, linking up to the Llobregat axis and through Cadí Tunnel with France via Puigcerdà and the Puymorent tunnel.
- The C-31 motorway linking to National Highway II up in the French border.
- National Highway II in the west, centre and north of the country.
- National Highway C-17 to the French border via Puigcerdà. - National Highway 150, with Sabadell, Terrassa and Manresa.
- National Highway 340, linking to the south and eastern coast.

Rail

The rail lines joining the port and its environs with the rest of the country are:

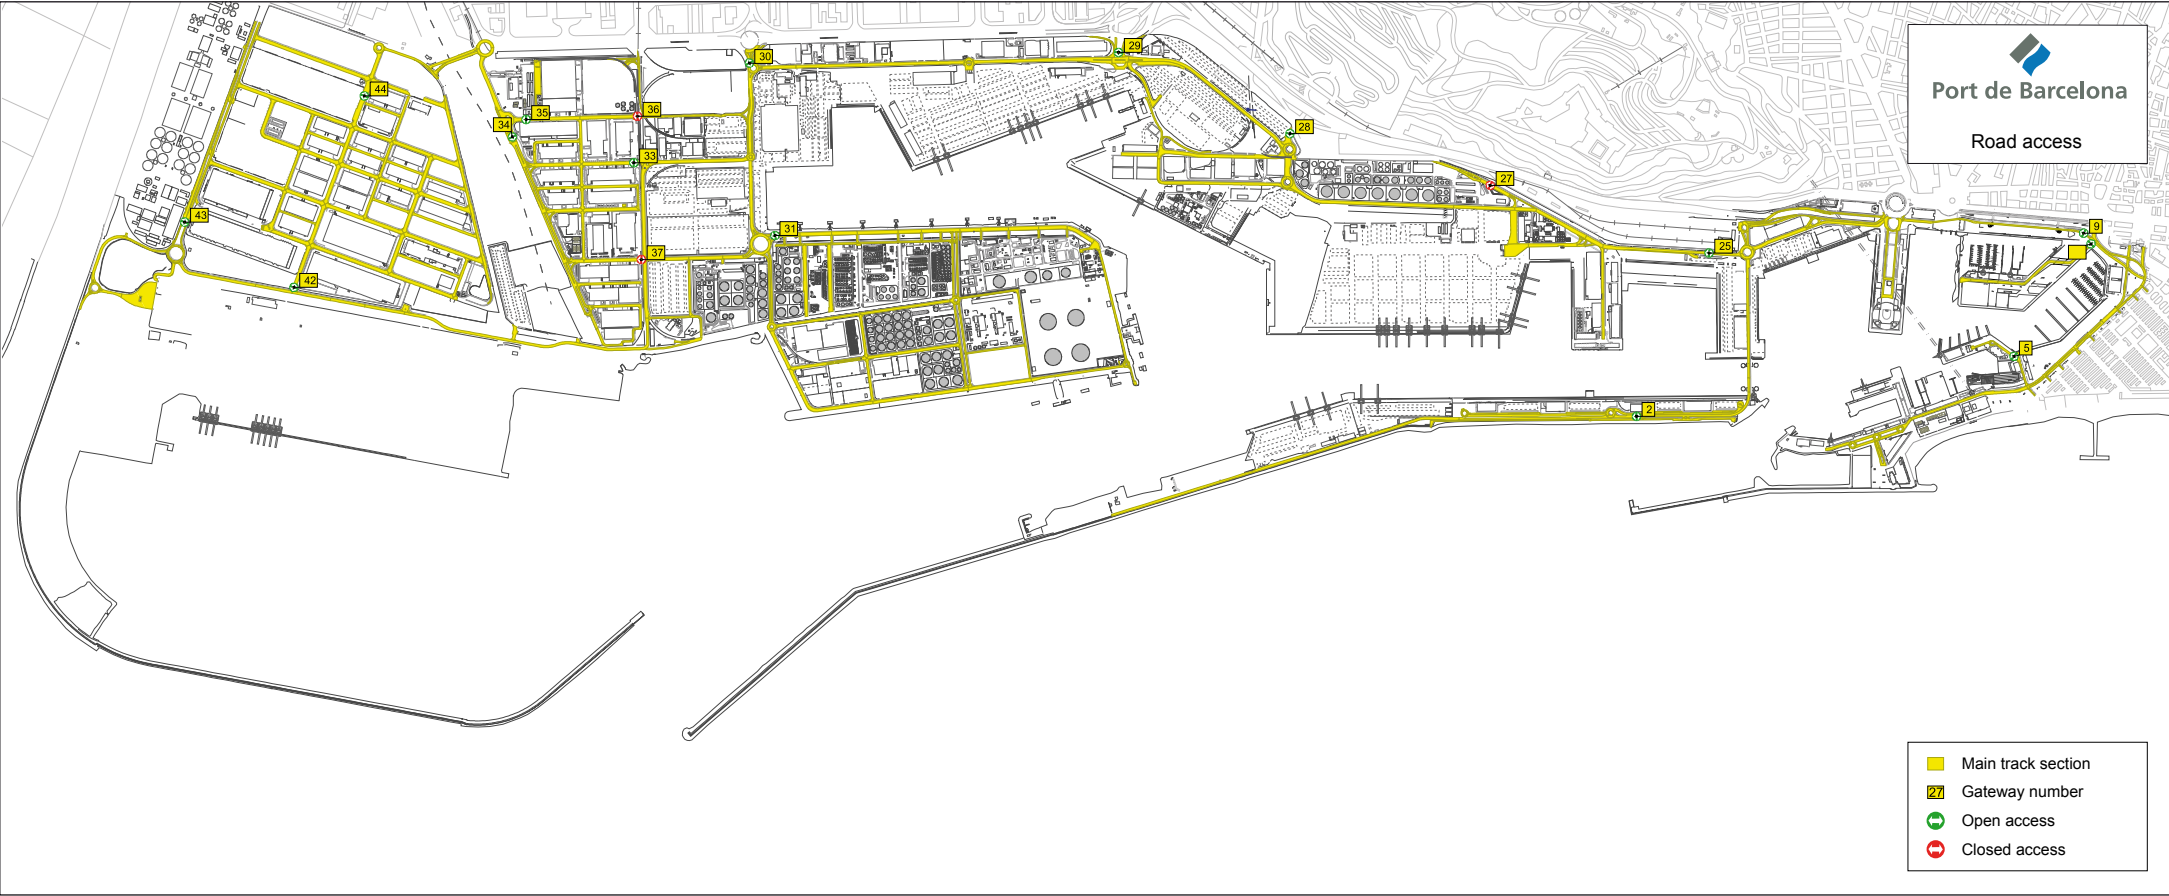

Renfe (Iberian gauge)

- In Port-Bou (France) via Mataró and Granollers
- In Puigcerdà
- In the centre, west and north of the country via: Manresa-Lleida, Sant Vicenç-Lleida, Tarragona-Zaragoza
- In the west, south and east coast of the country via: Tarragona-Valencia

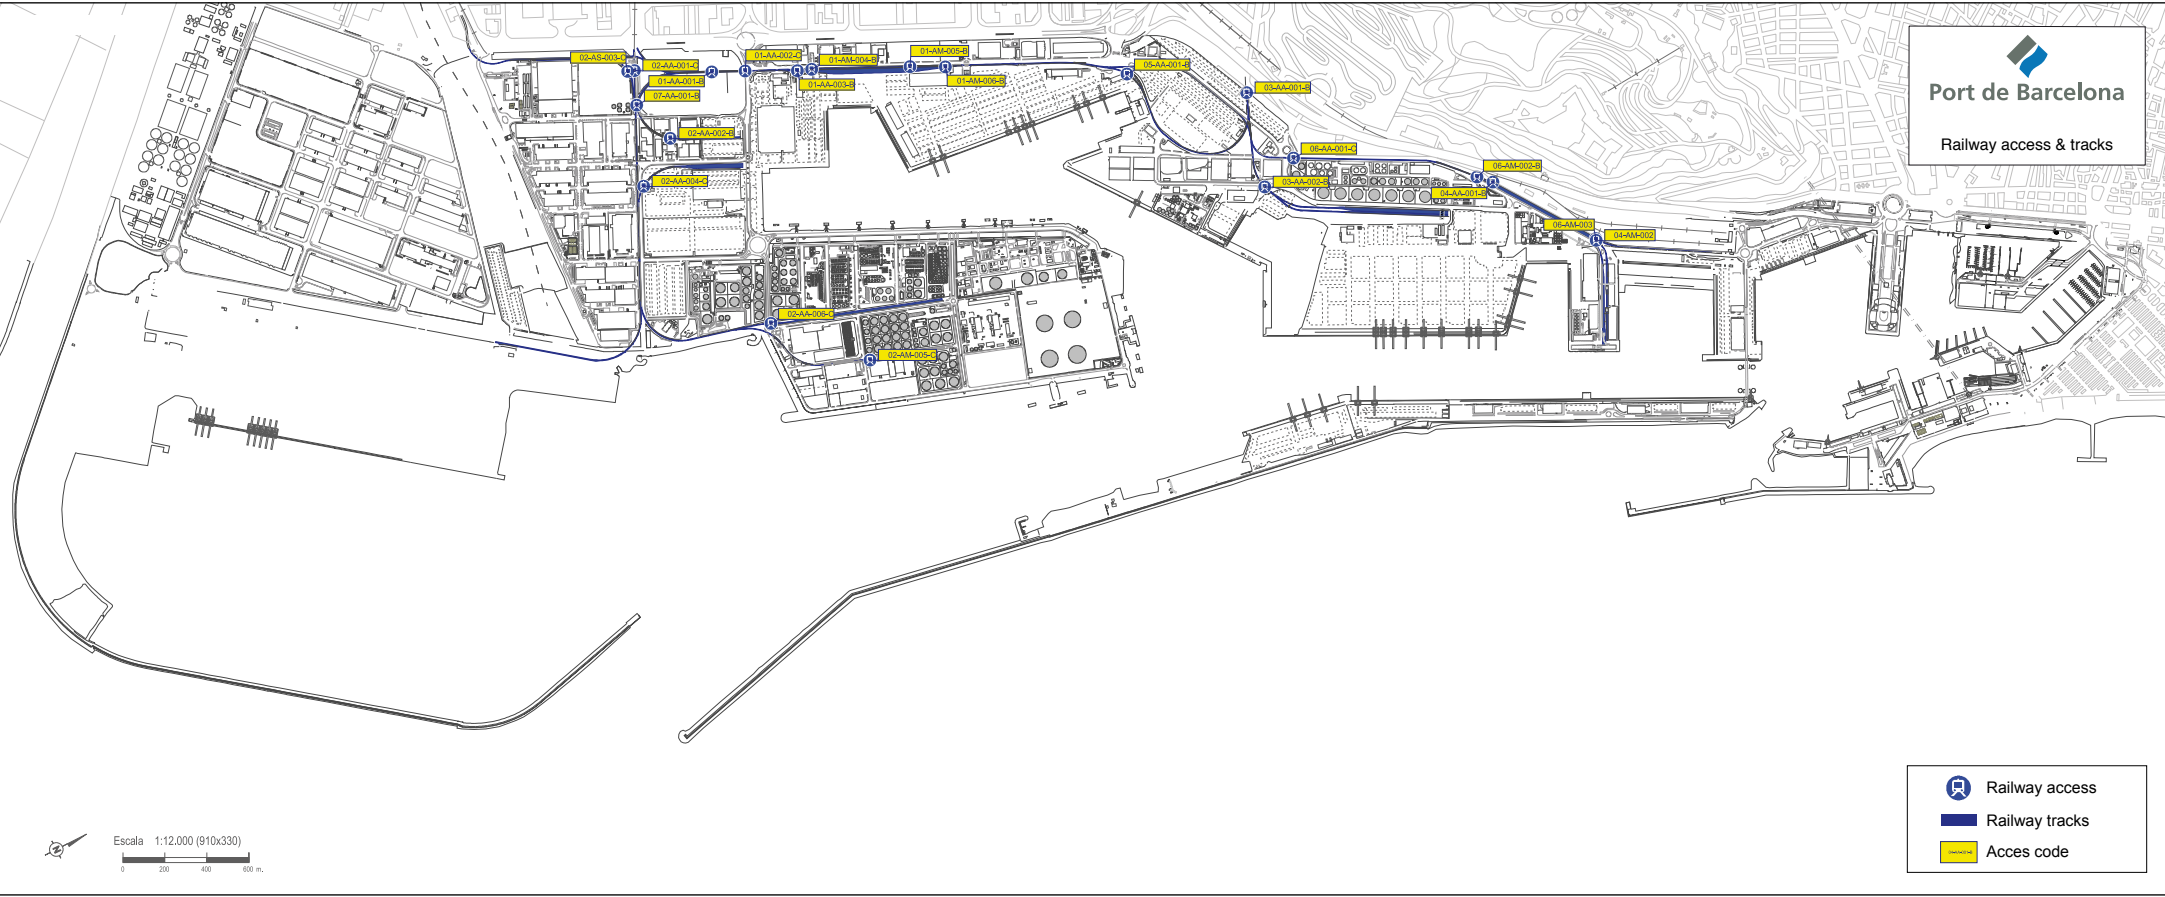

Ferrocarrils de la Generalitat de Catalunya

- In Manresa, Súria and Berga (metric gauge)
- In Igualada (metric gauge)
- In Sabadell and Terrassa

2.7.2. Map of internal communications

2.7.3. Map of land accesses

2.8. Brief description of facilities for specific traffic types

Container and general cargo terminals

Cargo in external shipping regime

36A Prat wharf holds the public container terminal granted under a lease to Tercat Hutchinson. The terminal has a terraced area under concession of 42 ha, a berthing line of 1,000 m and a draft of 16 m. For shipping operations, the terminal has 8 super post-panamax type cranes.

The Public Container Terminal is located in 24 Sud wharf under a leaseholding granted to TCB, SL. It occupies an area of 68.8 ha and has two berthing lines, one on the north face, 350 m long and 12 m deep, and the other on the east face, which is 1,160 m long with a draught of between 14 and 16 m. This terminal has 14 container ship cranes, 8 of which are post-panamax type.

Terminal Catalunya SA holds the lease on a "multipurpose" terminal on 29 Príncipe d'Espanya wharf. Covering an area of 33.9 ha, with a berthing line of 1,653 m and a draught of between 8.7 and 14 m, the terminal has two ro-ro ramps and 22,145 m² of covered warehouses. The terminal also has 9 container ship cranes, all of which are of the post-panamax type.

On 01 Adossat wharf there is a "multipurpose" terminal operated by Terminal Port-Nou, SA. This terminal occupies an area of 4.9 ha, with draughts of between 12 and 16 m and has a berthing line of 480 m and a ro-ro ramp. Terminal Port-Nou, SA has 2 container cranes in this terminal.

Cargo in coastal shipping regime (cabotage)

In 19 Ponent and 20 Sant Bertran wharfs, Terminal Ferry de Barcelona, SRLU has a leaseholding area of 11.3 ha for handling passenger traffic and cargo (ro-ro). In total, the terminal has 1,270 m. of berthing line, with draughts of between 7.8 and 11.2 m and 7 ro-ro ramps.

Car terminals

The two car terminals - Autoterminal, SA and Setram SA - are located on 30 Dàrsena Sud and 31 Dàrsena Interior wharves. The berthing line of these wharves is 850 m, with a maximum draught of 12 m, and has four ro-ro berths.

Autoterminal has an area under lease of 29.2 ha, with four multi-storey lots, making it possible to increase the total warehousing area by 377,975 m². The terminal has a capacity for 48,481 vehicles, of which 21,500 can be stored in the open air and the remaining 26,981 under cover. The terminal also has a vehicle personalisation centre and a cleaning and protection-removing tunnel.

Setram occupies a leaseholding area of 9.4 ha and has one vertical car storage area, which it shares with Autoterminal, which has increased its available area by 81,845 m² (4,934 places).

Setram also has part of a second multi-storey car store, which it shares with Autoterminal, allowing it to increase its available area by 88,700 m². The combination of the two multi-storey car parking areas provides the Setram terminal with a capacity of around 15,000 vehicles, approximately 9,000 of which are under cover.

Bulk grain and seed terminal

22B Contradic Est wharf houses the Ergransa terminal, specialised in receiving bulk grain and seed. It has multi-cellular silos with a warehousing capacity of up to 170,000 t. This terminal has a practical pneumatic unloading capacity of 900 t/h.

Terminals for milling soya bean

26B Álvarez de la Campa and 23B Oest wharves are home to Cargill España, SA and Bunge Ibérica, SA, both of which are specialised in soya bean traffic. They have milling plants with a capacity of up to 1,400,000 t.

Bulk cement receiving and dispatching terminals

The Portcemen cement, SA terminal stands on 22C Contradic wharf. This terminal has silos with a capacity of 72,000 t.

Potash loading terminal

Tramer, SA is located on 22A Contradic Nord wharf and specialises in loading potash. It has a maximum storage capacity of 80,000 t and is equipped with a gantry crane able to load 700 t/hour.

Terminals for unloading, loading and storing liquids and liquefied gas

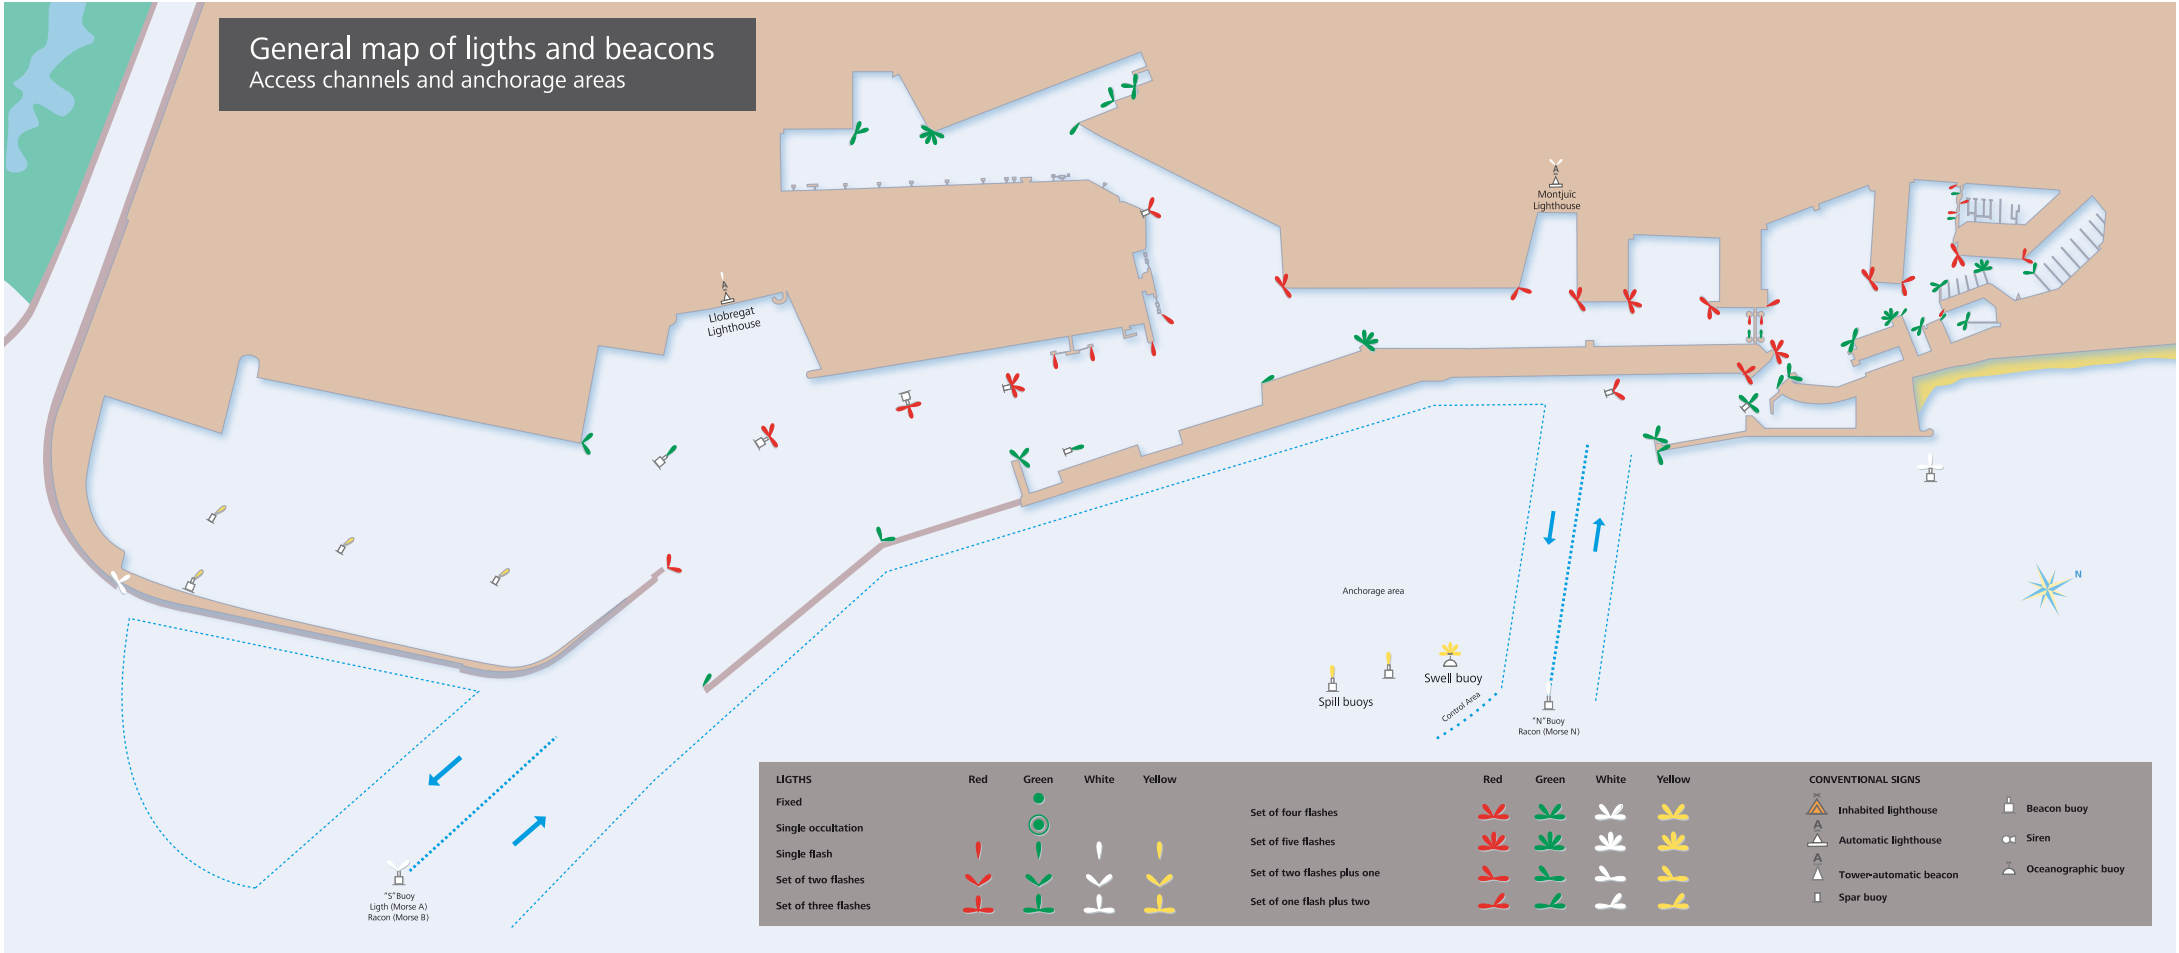

The Port of Barcelona has the following specialised terminals for this segment of traffic: Enagás, SA (natural gas), Koalagás (LPG), Relisa (oils), Tepsa and Terquimsa (chemicals and refined petroleum) and Decal, Meroil, Meroil Tank and CLH (refined petroleum products).

These terminals are located on the 32 Energy wharf and in section 4 of the Port ring road. They occupy an area of 89.08 ha with a dedicated berthing line of 2,672 m and a draught of up to 12 m. They have a total storage capacity of 2,660,688 m³ for liquids and 844 000 m³ for liquefied gas.

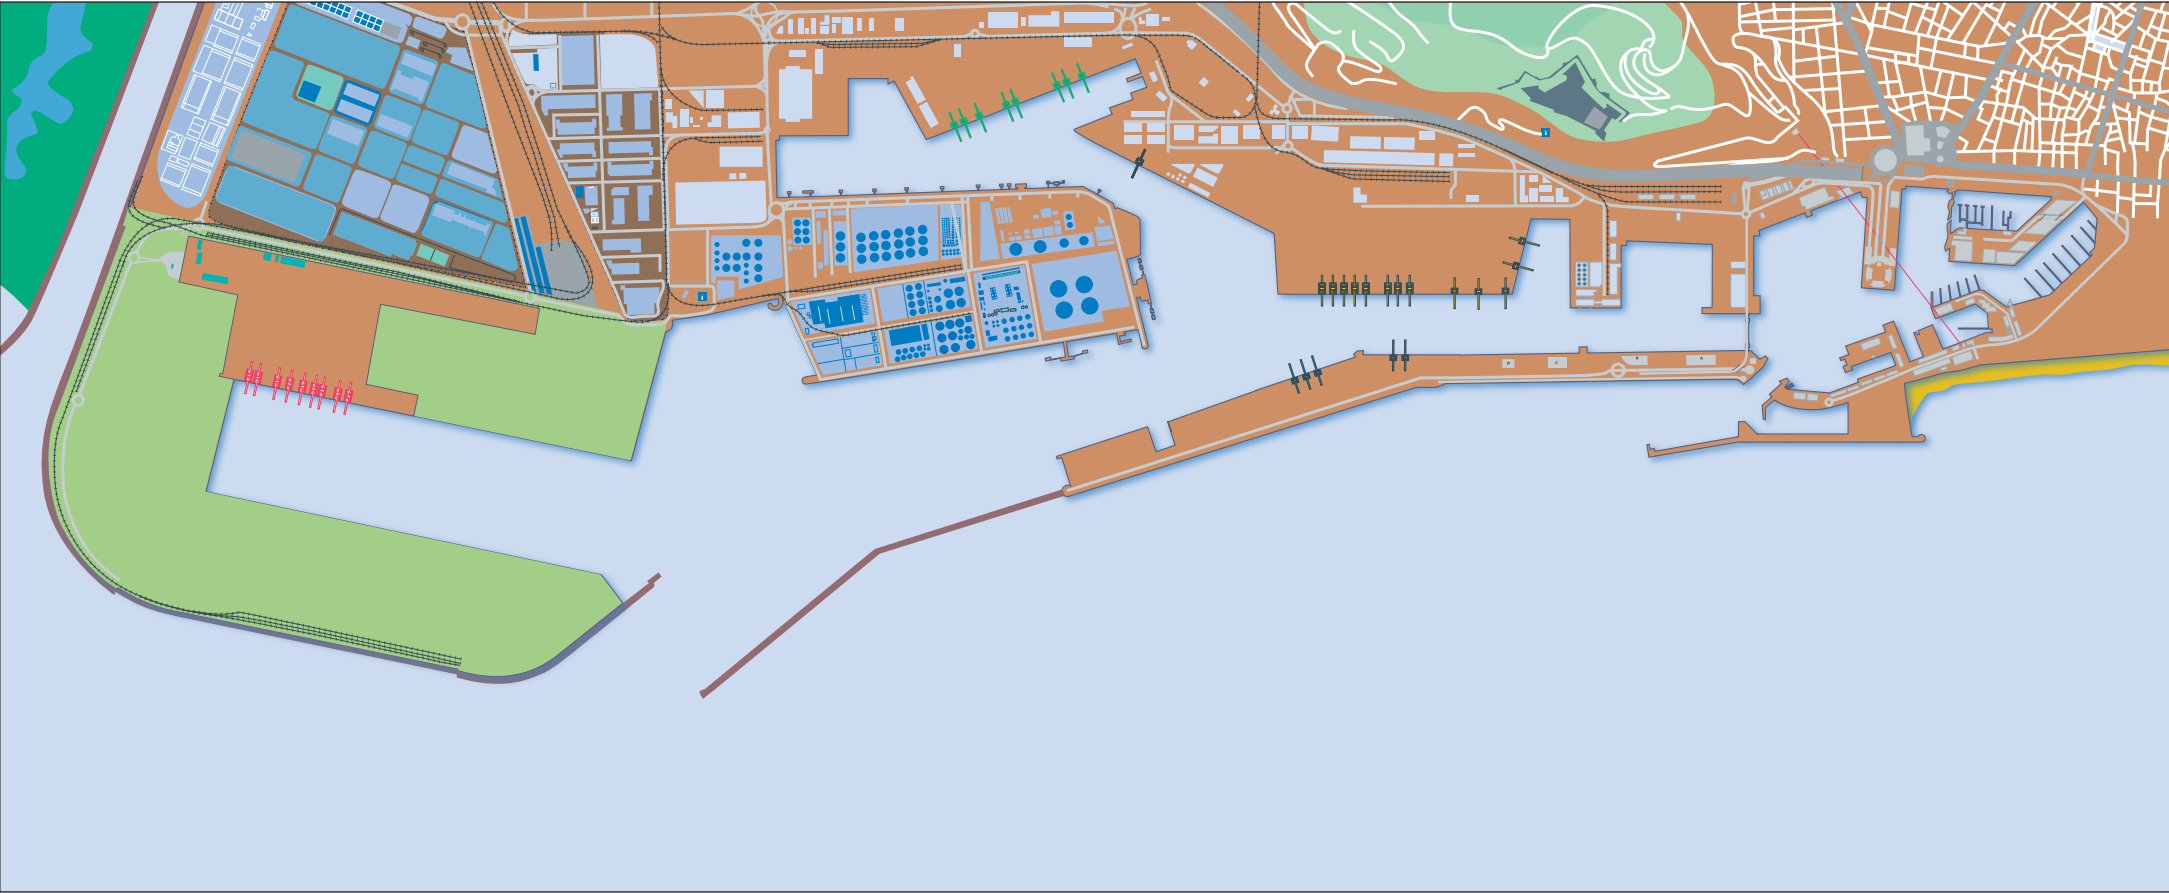

Coffee and cocoa terminal

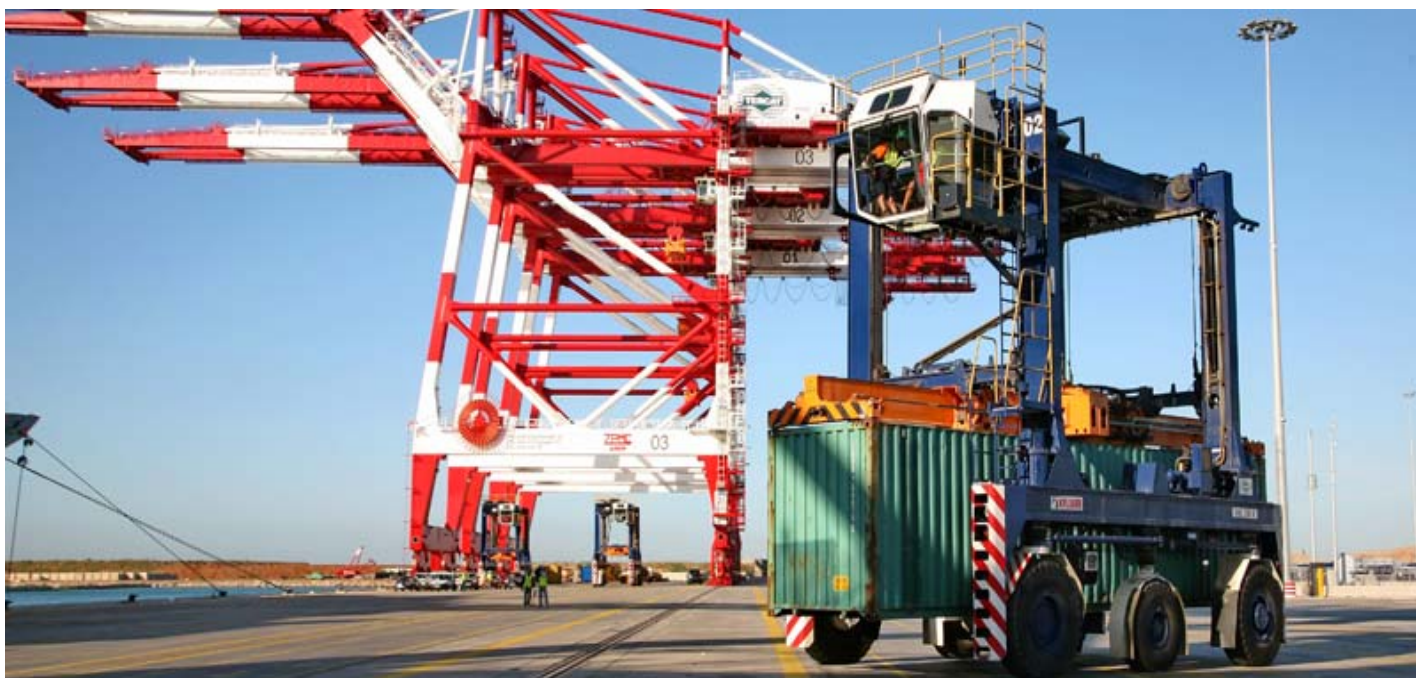

26 Álvarez de la Campa wharf holds the BIT, SA terminal. Covering an area of 11,000 m² and with the capacity to store 14,000 tonnes of coffee and cocoa, the terminal is under tax free regime and is type-approved by the LIFFE (London International Financial Futures and Options Exchange), which is required for coffee delivery and auctioning.

2.10. General map of Port

3 Authorised private-sector construction works and activities

Although the land itself is owned by the public sector, most of it is leased out, through a number of legal deeds, to private companies providing port services. This chapter contains firstly a list, organised by wharf, of all the areas leased out to private companies before the start of 2012, with specific details concerning size, functional use, date on which authorisation was granted and the fee paid to Barcelona Port Authority.

There follows a list of all the construction works and activities authorised in 2012.

INTRODUCTION

3.1. Authorised before 2012 and currently in force

3.2. Authorised in 2012

3 Authorised private-sector construction works and activities

3.1. Authorised before 2012 and currently in force

9	AUTHORISING the merger by absorption of the leaseholdings held by ACUARIOS OCEANWORLD SLU on Espanya wharf	APB 26-SEP-12	ASPRO OCIO, SAU	23.92	200,363.91
10	Amending the leaseholding, involving, inter alia, an increase in area	APB 28-Nov-12	MARINA PORT VELL, SAU	3.16	260,353.07
11	Granting a leaseholding to build and operate a pipeline to transport styrene between the Energy wharf and its facilities in the ZAL.	APB 28-Nov-12	TOTAL PETROCHEMICAL IBERICA, SLU	6.64	14,286.66
12	AUTHORISING the transmission of the ENAGAS, SA leaseholdings on the Energy wharf	APB 12-DEC-12	ENAGAS TRANSPORTE SAU	8.82	2,978,136.66

4 Traffic statistics

This chapter contains an extensive description of the traffic of the Port of Barcelona. These statistics show movements of passengers, number of ships that have entered the port - classified according to size, flag and type - and the goods traffic in 2012. Note that point 4.7 contains specific information on containerised traffic and point 4.8 provides a summary of all of the traffic in the Port of Barcelona.

INTRODUCTION

4.1. Passenger statistics

4.1.1. Passengers

4.1.1.1. Number of passengers

4.1.1.2. Number of passengers on regular lines. Ports of origin and destination

4.1.2. Passenger vehicles. Number of units

4.2. Ships

4.2.1. Merchant vessels

4.2.1.1. Distribution by tonnage

4.2.1.2. Distribution by flags

4.2.1.3. Distribution type of vessel

4.2.2. Warships

4.2.3. Fishing vessels

4.2.4. Pleasure craft

4.2.5. Vessels entered for breaking

4.2.6. Other craft

4.3. Cargo, in tonnes

4.3.1. Handled by wharves and service berths

4.3.2. Handled on private wharves and berths

4.3.3. Unloaded and loaded during the year

4.3.4. Total cargo by nationality of ports of origin and destination

4.3.5. Transshipped cargo

4.3.6. Roll-on / Roll-off traffic

4.3.6.1. Summary of roll-on/roll-off traffic

4.3.6.2. Units of roll-on/roll-off intermodal (UTI) transport

4.3.6.3. Units of vehicles in cargo regime

4.3.7. Classification of cargo

4.3.7.1. Classification by type

4.3.7.2. Classification by type and presentation

4.3.7.3. Classification of goods in transit by type

4.3.7.4. Classification of goods by NST-2000

4.4. Local or river traffic, in tonnes

4.5. Ship supplies

4.6. Fish catches

4.7. Container traffic

4.7.1. 20-foot containers

4.7.2. Containers over 20 foot

4.7.3. Total containers of 20 foot and over

4.7.4. Total containers of 20 foot and over in transit

4.7.5. Total 20 foot equivalent containers (TEUS)

4.7.6. 20 foot equivalent containers (TEUS) in transit

4.7.7. Goods transported in containers classified by type, in tonnes

4.8. General summary of maritime traffic

4.8.1. General table number 1

4.8.2. General table number 2 (Including local traffic, supplies and fishing)

4.8.3. General table number 3

4.9. Land traffic

4 Traffic statistics

4.1. Passenger statistics

4.1.1. Passengers

4.1.1.1. Number of passengers

5 Use of the Port

This chapter describes the activity at the Port of Barcelona during 2012 from a different perspective from that of the previous chapter. It offers data on the use of the many Port facilities, including the cargo loaded and unloaded on each wharf, the number of vessels entering dry dock and their tonnage, and the sum of the lengths of all vessels berthing at the Port in 2012.

INTRODUCTION

5.1. Use of wharves (t)

5.2. Basins

5.3. Pointed mooring

5.4. Berths

5.5. Area utilisation (t/day)

5.6. Mechanical shore equipment.

5.6.1. Cranes

5.7. Conveyor trucks

5.8. Conveyor belts

5.9. Mechanical shovels

5.10. Railways shunting, locomotives

5.11. Wagons

5.12. Trucks

5.13. Weighbridges

5.14. Floating cranes

5.15. Tugboats

5.16. Slipways

5.17. Description of terminals and wharfs

5.18. Floating dock

5.19. Barges

5.20. Dry dock

5 Use of the Port

5.1. Use of wharves (t)

6 Construction works

This chapter includes the investments in construction works that were partially or completely executed in 2012 by the Barcelona Port Authority. A description of the main projects is included.

The enlargement works of the Port of Barcelona have been co-financed by the European Union Cohesion Fund

INTRODUCTION

6.1. Works in progress or completed during the year

6.2. Brief description of the most important works

6 Construction works

6.1. Works in progress or completed during the year

N.	Investment Code (OPEE)	Title	Net budget approved	Certified at 31/12/2011	Work performed during 2012	Certified at origin	Situation at 31/12/2012

6.2. Brief description of the most important works

Order	OPPE investment code	APB code	Title
1	PBN1A3006F001	OB-GP-M-0603/2007	SERVICES INVOLVING THE FITTING OF INSTRUMENTS AND MONITORING BEHAVIOUR OF THE PRAT TERMINAL PHASE II Justification: After the partial collapse of the Prat wharf, Barcelona Port Authority's Management Board, meeting on the 31st of January 2007, agreed to execute a number of short-term actions, without prejudice to any other alternative or complementary actions or measures that may be planned. Description: This involves managing the fitting of instruments to monitor and follow up the behaviour of the Prat Terminal Phase II, and depend directly on Barcelona Port Authority. The work to be performed comprises monitoring the movement of the caissons at the front of the terminal wharf and checking the settling on the terrace area that is to be pre-filled.
2	PBN1A4002E001	OB-GP-P-0402/2001	REDEVELOPING THE FISHING AREA (ICE FACTORY FACILITIES) Justification: The current fish market is located in an obsolete building, built more than forty years ago and now suffering severe corrosion problems caused by its metal structure (walls and roof). In addition to this, there are plans to reorganise and improve the entire Relotge wharf, where the auction is to be maintained following the agreement reached with the fishermen. There are plans to build a new auction building, which will be equipped with all necessary auxiliary facilities, such as an ice factory. The plan is to provide services tailored to current needs. Description: This involves supplying and installing specific machinery for the ice factory. As this is a unique construction, it has been separated from the structure of the building. The plan also defines the facilities required to operate the plant, which must be incorporated into the building or civil engineering project of the fish market.
3	PBN1A3028E001	OB-GP-P-0557/2006	ENLARGEMENT OF THE SUD WHARF Justification: The enlargement of the Port of Barcelona's Sud wharf is required to increase the turning basin and ship manoeuvring area. This action is part of the reorganisation of the Port's container terminals. Description: The project involved demolishing the CLH (Compañía Logística de Hidrocarburos) jetty, improving manoeuvring capacity in the dock located between the Sud, Adossat and Energy wharves. This is the area in which boats currently turn, and the work concerned has helped to increase the distances and draught in this dock. The works have also affected the Terminal de Contenedores de Barcelona (TCB), increasing the area available for container storage and the alignment of the Sud wharf. Building a 623 m berthing wharf and an 18 ha terrace. Objectives of the action: a) Berthing. a.1) On the east face of Alvarez de la Campa wharf and the south face of Sud wharf: creation of three berths, replacing those previously located on the demolished jetty, improving their depth. The south face of the new berth of the Sud wharf allows for the operation of a vessel of up to 250 m in length, with a draught of 14.5 m. Two berths have been enabled on Alvarez de la Campa wharf, with a draft of up to 12 m for vessels with a length of 250 and 60 m respectively. a.2) On the east face of the Sud wharf, the berthing line is expected to increase by 10 % from 1,013 to 1,113 m. The current draughts of the east face of the Sud wharf are variable (450 m - 14 m and 563 m - 16 m), extended to a draught of 16 metres. This will allow the simultaneous operation of two ships 300 m in length, with draughts of between 14 and 16 m. b) Area Apart from a small strip of land used to access the berths replacing the jetty, the new area to be produced by enlarging the Sud wharf, along with a plot on Alvarez de la Campa north wharf, will be used to extend the current container terminal by 22 ha, from 55 to 77 ha. With this extension of the area, the capacity of the container terminal on the Sud wharf will increase from 1.3 to 2.1 million TEUs.
4	PBN1B4066E001	OB-GP-P-0561/2006	DEVELOPMENT OF THE ENERGY WHARF Justification: Following an analysis and assessment of the state of urban development and upkeep of much of the Energy wharf road sector, with little work performed since the original road was built in the nineteen-sixties and seventies, it was considered necessary to undertake action to redevelop the area to bring it up to current standards and requirements. Description: This project defines the reorganisation of the traffic lanes and pavements on various streets within the Energy wharf area. Specifically, these works will focus on the following points: Av. moll de l'Energia, Av. moll de l'Energia (interior), C/ Port de Gènova, C/ Port de Rotterdam, C/ Port d'Alexandria, and the ronda del Port internal ringroad. It provides specifically for the general overhaul of pavements in disrepair. There are also plans to resurface all roads covered by this action. On Av. moll de l'Energia, there are plans to create car parking areas along the entire sea side of the road. There is also to be a general reorganisation of the Av. moll de l'Energia (interior). The curb will be repaired on the leaseholders' side, and standardised to a width of 2.40 metres from a variable width of between 2.55 m and 4.30 m. The lane will be transformed from a width of about 7.00 m to a platform with two hard shoulders of 0.35 m and two lanes 3.35 m wide. For the pavement and parterre on the channel side, there are plans for a reinforced concrete structure that will make it possible to create 200 parking spaces along the street. Advantage will be taken of the urban development of the streets to reorganise the various services affected by them.

Order	OPPE investment code	APB code	Title
5	PBN1A4382E001	OB-GP-P-0621/2008	MOVEMENT OF PRE-LOADED MATERIALS (ACTION 6) PRAT TERMINAL Justification: The Port of Barcelona's Master Plan is developed as part of the Delta Plan, which includes a series of spatial activities, particularly the construction of the South and East Seawalls and the Prat wharf. This 1,500 metre-long wharf is the first container terminal built in the port enlargement area and is located on the west side of the basin. The construction of the first 1,500 metres of the Prat wharf was divided into two phases. The first of these, called Prat Wharf Phase 1, consists of 25 reinforced concrete caissons and totals 1,000 metres of berthing. Phase 2, located south of Phase 1, has 12 caissons and is the basis for 500 metres of berthing line. On 15 November 2006 Barcelona Port Authority granted TERCAT a thirty-year concession to operate the Prat wharf. Sixteen concrete caissons of the wall of Prat Wharf Phase 1 slid out of place as a result of storm damage on 16 January 2007. The works for the "Rebuilding the Prat Wharf" project were completed, following which various actions were started and will be implemented by the Port Authority in accordance with the aforementioned concession contract. Description: The purpose of this activity is to define the works required to form the terrace behind the wharf line corresponding to Phase 1 of the Prat wharf. Specifically, the project defines the works required to form the terrace approximately behind caissons 6 and 12 corresponding to the manoeuvring area, behind caissons 13 and 24. It also covers strengthening the northern embankment of the Prat terminal to ensure proper conditions of stability in accordance with the new requirements caused by the pre-filling being installed. In parallel to the withdrawal of the pre-filling, and some time later, we expected to build a terrace crowned by "quarry ballast" at least 60 cm thick both in the maneuvering area and in the deposit.
6	PBN1B3007E001	OB-GP-P-0633/2008	NEW ACCESSES ON THE SUD ENLARGEMENT. PHASE 1 A Justification: With the coming on stream of the future container terminal on the Prat wharf, new land accesses need to be built to the terminal and entry control points defined to restrict access to the port precinct. Likewise, the new terminal must be connected to the rail network in the Port of Barcelona using the International Rail Gauge. Description: The aim of the project is to construct the first phase of the Port of Barcelona's new internal road system that is being built as a result of the enlargement of the precinct towards the south. The new road system begins from the south where it meets the Port's Avenida Estany (formerly "100" Street) and runs parallel to the eastern border of the Logistics Activities Area to "4" Street. The general approach of Phase 1 includes all the elements required to allow normal working of the new TerCat container terminal.
7	PBN1A2046E001	OB-GP-P-0662/2010	IMPROVING THE EAST SEAWALL. PHASE 3 (rebuilding emerging wall) Justification: The series of storms that have occurred over the years have caused gradual damage to the outer layer of the filter and emerging wall in various sections of the old East seawall, requiring repairs to ensure that the infrastructures are safe. The improvements are planned in four phases, with this particular action comprising phase three. Description: The aim of this project is essentially to treat the cracks detected and place a filling layer on the emerging walls of stretches 3, 4 and 5 of the old East seawall.
8	PBN1A2047E001	OB-GP-P-0663/2010	IMPROVING THE EAST SEAWALL. PHASE 4 Justification: The East seawall, parallel to the coast, shelters the port from the main storms. However, this bad weather has led to a progressive degradation of the seawall itself. The Port Authority of Barcelona conducted a study to analyse the state of the seawall and draft an associated construction project to include repairing the damage detected, strengthening and improving their general condition. Description: The improvement works of the seawall have been planned in four phases, of which this action is the fourth. The sloping wall of the seawall's outer layer has been reinforced and a berm has been built to protect the foot of this wall in section 4. We have also reinforced the sloping wall of the seawall's outer layer in section 5 from a depth of - 4.50 m up to the crowning of the sloping wall at a height of 8 m.
9	PBN1A4387E001	OB-GP-P-0673/2011	SUPPLY OF GRANULAR MATERIAL FROM RECYCLED CONSTRUCTION WASTE Following the positive experience under the first contract to supply granular material, in which the various materials produced were used intensively in the works to rebuild the Prat wharf and other simultaneous works (drainage layers, extrados of caissons and structures, various layers for improving the terraces, replacing or adding the hard core of the embankments, etc.) the model for reusing these materials has proved to be an ideal solution. This approach helps to protect the environment, since it reuses demolition materials that would otherwise have to be managed in landfills. It also provides significant savings for the Port Authority of Barcelona, which does not need to obtain raw materials for its works projects. That is why it has renewed the contract to supply such materials. Description: The contract covers supply of granular material recycled from building demolitions, to be used in the various works projects performed by the Barcelona Port Authority.
10	PBN1B1005E001	OB-GP-P-0683/2011	FITTING OUT BERTHS 32 G AND 32 E Justification: Within the concession agreements signed with the operator Tradebe Port Services, S.L. located on the Energy wharf, plans were made to adapt berths 32 G and 32 E to the specific product lines with which it operates. The operational capacity of the berth was also increased. The Port of Barcelona has taken on responsibility for renewing and adapting the infrastructure and the concession holder has organised the laying of lines or pipes and new unloading arms. Description: The project involved creating a new mooring dolphin comprising four large diameter piles and a superstructure holding the anchoring snap hook, with a pedestrian walkway for access. In addition, certain elements, such as anchoring elements and snap hooks, were renewed on the 32 G and 32 E and some defences.

Order	OPPE investment code	APB code	Title
11	PBN1A9005E001	OB-GP-P-0685/2011	EXTENDING THE ACCESS CHANNEL TO BERTH 34 B Justification: The Port of Barcelona's ongoing enlargement in the Delta area includes implementing new mooring platforms for ships. Specifically, the new berth 34 B is already operating on the east side of the Energy wharf sector. A connection has already been made with the current pipe trench in "Port d'Alexandria" street to operate this berth. The current channel needs to be extended to provide service to the new concession holders located on the south side of "Port de Ningbó" street, situated on the other side of "Port d'Alexandria" street. This extension runs from the beginning of the existing channel, at "Port d'Alexandria" street up to plot E-11. Description: This project involves defining, justifying and assessing the work needed to extend the access channel for bulk liquids in the Port of Barcelona's Energy wharf. The project design process took into account the planned and implemented solutions in the section adjacent to this extension, developed under the project entitled Berth channel for liquid bulk carriers - (OB-GP-P-0615/2008) built by EPTISA in July 2009 and the as-built project of that works project, both provided by the Port Authority of Barcelona.
12	PBN1E2038E001	OB-GP-P-0693/2011	RAIL ACCESS TO THE PRAT TERMINAL Justification: As a result of the current guidelines for adapting the Port of Barcelona's railway facilities to international gauge trains, it is necessary to connect the railway terminal of the new container terminal on the Prat wharf to the existing rail network and adapt this to UIC gauge. Description: Adapting the rail infrastructure on "4" Street within the Port of Barcelona precinct to allow access by trains from the Can Tunis railway terminal travelling on UIC gauge to the Prat terminal. In addition, the project along the common section of the project entitled UIC gauge access in the container terminal of the Príncep d'Espanya wharf has been extended to incorporate the metric gauge railway into the Port of Barcelona's network.
13	PBN1E2039E001	OB-GP-P-0697/2011	ADAPTING THE CONTRALOOP TO UIC GAUGE Justification: Barcelona Port Authority has attached a high priority to performing works to adapt existing rail facilities at the Port of Barcelona to allow trains to run on European UIC gauge, maximising existing opportunities since the connection to the UIC gauge at the French border in December 2010. Specifically, the action providing UIC gauge access to the Sud wharf was inaugurated in January 2011, just months after the completion of work to provide UIC access to Príncep d'Espanya wharf. This process also includes connecting the container terminal on Prat wharf to the existing rail network, adapting part of it to UIC gauge. In accordance with current guidelines for adapting the Port of Barcelona's railway facilities to international gauge trains, this project will adapt rail section 1 between points and crossings 01-CA-04 and 01-CA-06, which are currently mixed gauge (Iberian and metric) to allow railway traffic in any of the three gauges: Iberian, metric and UIC. This stretch of track is generally known as the "contraloop". Description: It includes following actions: - Renewing the first 30 metres of the current ballastless track systems with new slabs. The new slab section will incorporate UIC gauge in addition to the current Iberian and metric gauges. - Inserting rails and the corresponding check rails (road crossings only), on the sea side, with 54 kg / m rails to incorporate UIC gauge, acting locally in other existing slab track, keeping the rest of the platform in its current state. - Replacing the existing loop-contraloop connection between the Iberian gauge track and the UIC track coming from Can Tunis by the northern access (loop), with the Iberian and metric gauge part in the common section (Contraloop). The new connection makes it possible to cross Iberian gauge track with UIC and Iberian, metric and UIC gauge tracks.
14	PBN1E1049E001	OB-GP-P-0703/2012	DEVELOPING "114" STREET. CONNECTING THE PORT'S AVENIDA ESTANY AND "114" STREET Justification: 2012 marked the beginning of the commissioning of the first phase of the Prat wharf terminal, which will be completed in successive years until it acquires full configuration and capacity. It is therefore vital to create new road accesses to the terminal and to refurbish existing ones to adapt them to new capacity needs. Control points will also be defined for entry into the port area, and the rail connections to the terminal in conventional and UIC gauge will be adapted and installed. Description: The following work was performed within the scope of this action: - Improving the capacity of the current intersection, organising movements of existing traffic, which will result in increased traffic flow and improved road safety. - Completing development of the Port's Avenida Estany to extend the pedestrian and cycling routes. - Improving road safety by building elevated roadway crossings for pedestrians and cyclists. - Improving existing drainage conditions by building new limber holes and a drainage network, avoiding the current problems of flooding of the roadway. - Facilitating the future enlargement of the current section of "114" Street towards Barcelona, under the existing planning, with minimal changes and alterations to traffic. - Improving the urban image by standardising architectural actions as far as possible, putting an end to the current provisional image of the area and consolidating it as a key communications hub.

Order	OPPE investment code	APB code	Title
15	PBN1A1791E001	OB-GP-P-0712/2012	GENERAL DREDGING 2012 (DREDGING TO IMPROVE DRAUGHTS AND WHARF EDGES 2012) Justification: Restoring drafts in various docks and wharves which are no longer operating correctly, for various reasons, and improving drafts in four specific manoeuvring areas. Draught recovery is underway in various areas (Ponent wharf, Costa wharf, Contradic wharf, Morrot dock, Adossat wharf, Alvarez de la Campa wharf, Princep d'Espanya wharf, Energy wharf and Darasena Sud wharf) due mainly to movement of foundation materials caused by vessel propulsion, while in the four areas where the draughts have been deepened (Morrot and Sud docks, and Nou Contradic and Sud turning areas) the aim is to improve operational capacity for ship manoeuvring. Description: The works consist of the following actions: - Restoring drafts in various docks and wharves which are no longer operating correctly, for various reasons, and improving drafts in four specific manoeuvring areas. - Transporting and disposing of dredging products within the areas established for each category of dredged material. The material established in category 1 will be deposited in the outside dumping area, while category 2 material will be poured into the internal transfer pit.
16	PBN1A9592E001	OB-GP-P-0715/2012	DEMOLISHING THE RO-RO RAMP ON ADOSSAT WHARF Justification: To adapt the port facilities to the significant growth in cruise traffic, Barcelona Port has deemed it necessary to demolish the existing Ro-Ro ramp on Adossat wharf between cruise terminals B and C. Description: The contract covers removal of the Ro-Ro ramp on Adossat wharf and totally refurbishing the capping of the wharf hidden behind the ramp. The continuity of the wharf line will allow greater flexibility in distributing vessels along the wharf, achieving higher productivity and yield of the port areas.
