## **1 Financial statements**

**The present chapter includes the balance sheet, the profit and loss statement and the source and application funds statement for fiscal years ending 31 december 2003 and 2002.**

**The 2003 data is pending auditor's report.**

**Furthermore, a chapter on the 2003 economic-financial report will be found at the Annual report.**

## **Introduction**

- 1.1. Balance Sheet**
- 1.2. Profit and Loss Statement**
- 1.3. Source and application funds statement**

## 1 Financial statements

### 1.1. Balance Sheet

ASSETS	Thousand of euros		LIABILITIES	Thousand of euros	
	2003	2002		2003	2002

## **2 Technical characteristics of the Port**

**This chapter contains a physical description of the Port of Barcelona; its geographic location and climatic conditions, its land accesses, the location of lighthouses and beacons which facilitate maritime access, the distribution by use of the port's 828.9 ha of land (including the ZAL) and the draught along the more than 20 km of wharves.**

**Finally, this chapter contains an inventory of the facilities and equipment in the Port.**

## **Introduction**

- 2.1. General data**
  - 2.1.1. Location**
  - 2.1.2. Wind pattern**
  - 2.1.3. Deep-water storm pattern**
  - 2.1.4. Tides**
  - 2.1.5. Entrances**
    - 2.1.5.1. Access canals**
    - 2.1.5.1. bis Map of access channels and anchorage areas**
    - 2.1.5.2. Entrance mouth**
    - 2.1.5.3. Use of tugs in vessel entry and exit**
    - 2.1.5.4. Largest vessel entered in last five years**
  - 2.1.6. Flotation areas (ha)**
    - 2.1.6.1. Zone I**
    - 2.1.6.2. Zone II**
  - 2.1.7. Land area (m<sup>2</sup>)**
  - 2.1.8. Breakwaters (m)**
- 2.2. Simplified map of lights and beacons**
  - 2.2.1. General map of ligths and beacons**
  - 2.2.2. List of lights and beacons**
- 2.3. Wharves and berths**
  - 2.3.1. Classification by basin**
    - 2.3.1.1. Service**
    - 2.3.1.2. Private**
  - 2.3.2. Classification by use and draught**
- 2.4. Storage facilities**
  - 2.4.1. Storage facilities**
  - 2.4.2. Bonded storage facilities**
- 2.5. Commercial and shipping facilities**
  - 2.5.1. Dry docks**
  - 2.5.2. Floating docks**
  - 2.5.3. Slipways**
  - 2.5.4. Shipyards**
  - 2.5.5. Refrigerated warehouses and ice factories**
    - 2.5.5.1. Refrigerated warehouses**
    - 2.5.5.2. Ice factories**
  - 2.5.6. Fishing facilities**
  - 2.5.7. Passenger terminals**
  - 2.5.8. Official buildings**
  - 2.5.9. Other commercial and public buildings and facilitites**
- 2.6. Ship supply facilities**
  - 2.6.1. Fuel supply**
  - 2.6.2. Water supply**
- 2.7. Internal communication and land access**

- 2.7.1. Internal communications**
- 2.7.2. Land accesses**
- 2.7.3. By other means**
- 2.8. Dockside cargo-handling equipment**
  - 2.8.1. Cranes**
    - 2.8.1.1. Dock cranes**
    - 2.8.1.2. Mobile cranes**
    - 2.8.1.3. Number of cranes. Summary**
  - 2.8.2. Special loading and discharge facilities**
  - 2.8.3. Mobile rail material**
  - 2.8.4. Auxiliary loading, discharge and transport material**
- 2.9. Floating material**
  - 2.9.1. Dredgers**
  - 2.9.2. Tugboats**
  - 2.9.3. Sludge lighters, lighters and barges**
  - 2.9.4. Floating cranes**
  - 2.9.5. Other auxiliary service means**
- 2.10. Brief description of facilities for specific traffic types**
- 2.11. General map of Port**

## 2 Technical characteristics of the Port

### 2.1. General data

#### 2.1.1. Location

Latitude 41° 20,1' N

Longitude (Greenwich) 2° 10,2' E

#### 2.1.2. Wind pattern

Prevailing, 3rd quadrant

Dominant, 4th. quadrant

#### 2.1.3. Deep-water storm pattern

Significant wave height within a period of 50 years

7.93 m

#### 2.1.4. Tides

Variations on the level of water caused by dominant winds and atmospherical pressure.

Lowest water level with respect top port zero mark

0.134 m

Highest water level with respect to port zero mark

0.988 m

#### 2.1.5. Entrances

##### 2.1.5.1. Access canals

The Port of Barcelona has two entrances, with their corresponding Access Canals.

##### South Access Canal. Location, Dimensions and Characteristics:

An Access Canal or Traffic Separation Device is set up for the Sud entrance mouth. The right shore of the canal is determined by the bearing of 165° / 345° from the green light of the extension of the l'Est dyke, starting at the cut off point at a distance of two miles and finishes at the intersection of bearing 080° / 260° from the Llobregat lighthouse.

The DST is 0.5 miles being the width of 1/2 cable, and thus each lane of the canal will be 2.25 cables wide.

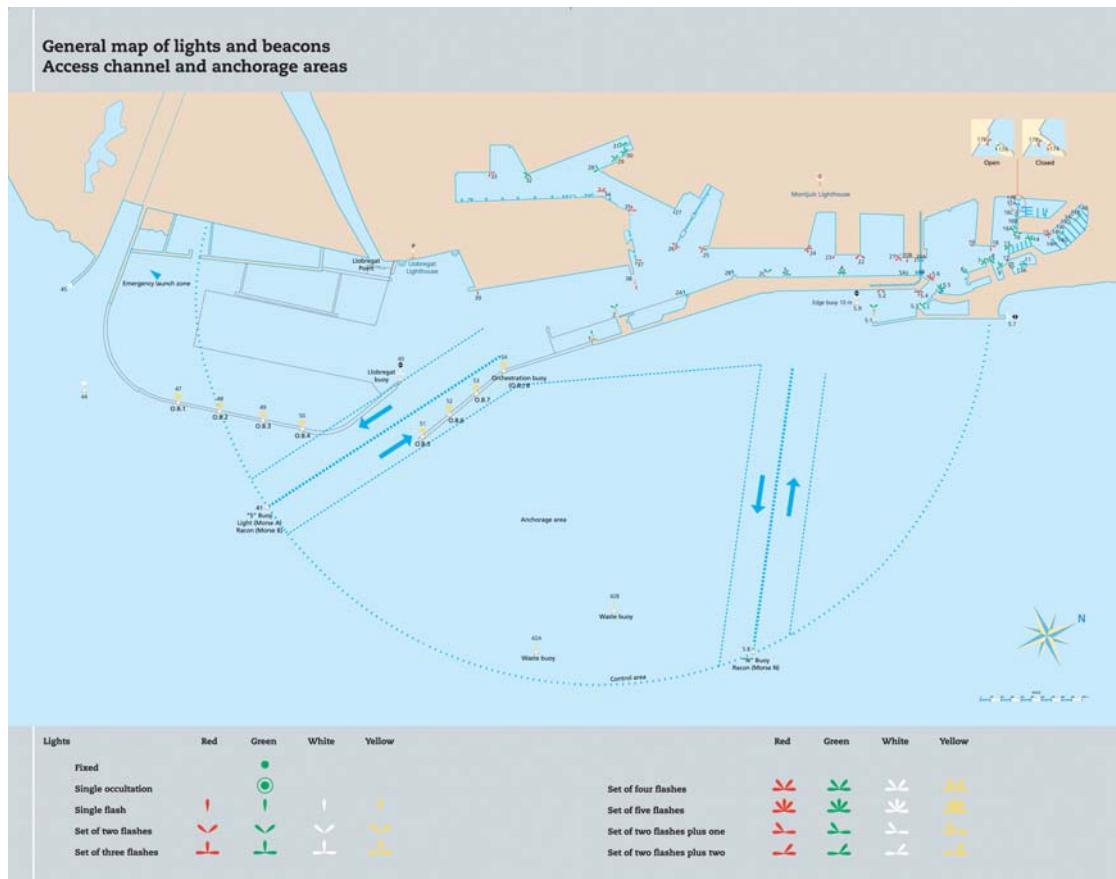

The landfall buoy "S" is located in the centre at the traffic separation zone and at its southern end at a distance of two miles from the green light, in situation: Latitude: 41° 18' 12" N and Longitude: 002° 10' 43" E.

##### North Access Canal. Location, Dimensions and Characteristics:

An Access Canal in the Nord entrance mouth is set up. The centre of North Access Canal is marked with a landfall buoy "N" located at Latitude: 41° 20' 06" N and Longitude: 02° 13' 03" E (bearing 125° Montjuïc Lighthouse at 2 miles of the green light of the North entrance mole).

It is oriented 305° entry / 125° exit. It is 5 cables wide and the South border of the canal delimits the anchorage area by the North. From a distance of 1/2 miles of the green light of the North entrance breakwater, the traffic will be one way (entry or exit).

## 2.1.5.1. bis Map of access channels and anchorage areas

### 2.1.5.2. Entrance mouth

<b>Sud entrance mouth</b>		
Width	370 m	
Depth at Water level	16 m	
Maximum recorded current	2 knots	

### Nord entrance mouth

Width	145 m	
Depth at Water level	11.5 m	

### 2.1.5.3. Use of tugs in vessel entry and exit

### 2.1.5.4. Largest vessel entered in last five years

	Greatest length	Greatest draught
Name	Norway	Sibotessa
Nationality	Bahamas	Norwegian
GT	76,049	41,189
DWT	13,960	74,918
Length	315.15	229
Type	Passenger vessel	Bulk-carrier
Incoming or outgoing real draught	10.49	14.48

### 2.1.6. Flotation areas (ha)

#### 2.1.6.1. Zone I

	Basins			Total (ha)
	Commercial	Fishing	Rest	
Inner port	331.30	3.68	44.50	379.48

## 2.7. Internal communication and land access

### 2.7.1. Internal communications

#### Road

A 13km. long ring road connects the different wharves and storage areas around the perimeter of the Port of Barcelona. This road has two lanes in each direction around most of its length.

Apart from the peripheral ring network there are also access and service lanes to each wharf, but they are secondary to the main ring road described above.

#### Rail

As for internal rail communications, from the Ponent wharf to the south, all the wharves have rail access, either with Renfe gauge (1.668 m), or with the gauge of the Ferrocarrils de la Generalitat de Catalunya (1m) or a mixed variety.

The Port's rail network is 33.475 km long, 15.45 km of which are Iberian gauge, 5 km of the gauge employed by the Ferrocarrils de la Generalitat de Catalunya and 4.700 km of mixed gauge (Iberian-Ferrocarrils de la Generalitat de Catalunya) and 3.63 km of mixed gauge (iberian-european).

Renfe serves a varied demand of traffic: containers, non-containerised general cargo, solid and liquid bulks.

The Ferrocarrils de la Generalitat serve the flow of potash that is embarked in Barcelona from the Contradic wharf.

The Sud wharf is equipped with a container rail terminal.

The automobile terminals each have their own rail terminal for cars.

### 2.7.2. Land accesses

The Port of Barcelona is located at the edge of a junction of land transport infrastructures. This is a motorway and rail network which links the Port to its hinterland.

#### Road

Given that the rondes, a fast ringroad around the perimeter of the city of Barcelona, pass right next to the Port, access to the road network is immediate.

The main roads and motorways are as follows:

- A-2 Motorway, linking up to the centre of the country, Aragon and the A-68 in the north of Spain and French border at Irún.
- A-7 Mediterranean Motorway, linking to the south with the east and centre of Spain and to the north with the French border and European motorway network.
- A-9 Motorway, linking to the A-7 to the French border via la Jonquera.
- C-32 Motorway, linking with the south and west.
- C-58 Motorway to Sabadell, Terrassa and Manresa, linking to the Llobregat trunk road and through the Cadí Tunnel to France via Puigcerdà and the Pimoret Tunnel.
- C-31 Motorway, linking up to the N II highway to the French border.
- N II highway, to the west, centre and north of the country.
- C-17 highway, to the French border via Puigcerdà.
- N 150 highway, to Sabadell, Terrassa and Manresa.
- N 340 highway, linking up to the south and east of the country.

#### Rail

The railways linking the Port and surrounding to the rest of the country are as follows:

- Renfe (Iberian gauge)
- To Port-Bou (France) via Mataró and Granollers
- To Puigcerdà (France)
- To centre, west and north of the country via: Manresa-Lleida, San Vicenç-Lleida, Tarragona-Saragossa
- To centre, south and east of the country via: Tarragona-València

- Ferrocarrils de la Generalitat de Catalunya
- To Manresa, Súria and Berga (metric gauge)
- To Igualada (metric gauge)
- To Sabadell and Terrassa

#### Pipelines

The pipes coming out of the Port to the consumption or distribution centres have the following characteristics:

Start	Diameter	Product	Destination
-------	----------	---------	-------------

Inflammables Wharf (Enagas Terminal)	1090 mm	Natural Gas	Derivados Azufre, SA (Zona Franca)
	10200 mm	Natural Gas	Consumption belt
	10200 mm	Natural Gas	Link to the sea edge of the ring

### 2.7.3. By other means

(Not applicable)

## **2.10. Brief description of facilities for specific traffic types**

### **Containers and general cargo terminals**

#### **Loading for external navigation**

On the Sud wharf you can find the Public Container Terminal, a concession granted to TCB, SL. It currently occupies an area of 46.0 hectares and has two berthing lines, one on the north face 350 m long and with a 12 m draught and another on the east face 1,012 m long and with a draught of between 14 and 16 m. This terminal has 9 container lifting cranes, 4 of which are of the post-panamax type.

On 29 Príncep d'Espanya wharf, the Terminal Catalunya, SA firm holds the concession of a multi-purpose terminal, with a surface area of 35.1 hectares, a berthing line of 1,653 m and a draught of between 8.7 and 14 m. The terminal has one ro-ro ramp and covered warehouses with a surface area of 26,145 m<sup>2</sup>. Likewise, the company owns 8 container lifting cranes, 7 of which are of the post-panamax type.

On 01 Adossat, 20 Ponent and 21 Costa wharves, there are two multi-purpose and one polivalent general cargo terminals run by Saport-Mapor, SA, Terminal Port-Nou, SA respectively. These terminals together occupy an area of 11.26 hectares, with a maximum draught of 12 m and a berthing line of 1,440 m. They also have a total of 8 ro-ro ramps and a total covered warehouse area of 32,000 m<sup>2</sup>.

#### **Cargo under Short Sea Shipping mode**

26 Álvarez de la Campa and 27 Lepant wharves (berths nos. 2 and 3) contain the area occupied by the company Estibadora de Ponent, SA for the handling of containers. This facility has an authorised area of 52,252 m<sup>2</sup> and 48,300 m<sup>2</sup>, respectively on each wharf with draughts of between 6.5m and 11.8 m and a berthing line of 870 m with three ro-ro berths. Likewise, it has 4 gantry cranes of 28 t and 2 container lifting cranes of 33.5 t and 41 t. This terminal, as well as short sea shipping, also handles exterior traffic with origin/destination in North Africa.

On Adossat wharf the company Transportes Marítimos Alcudia, is authorised to operate containerised goods on a flat area of 3.5 hectares and a berthing line of 170 m and 16 m of draught.

Finally, on Sant Bertran wharf, the Cía. Trasmediterránea, SA company has an authorised area of 34,995 m<sup>2</sup> for the handling of containerised goods.

### **Automobile terminals**

On 30 Dàrsena Sud and 31 Dàrsena Interior wharves there are the two automobile terminals: Autoterminal, SA and Setram SA. The berthing line of these wharves is 1,005 m with a maximum draught of 12 m.

Autoterminal has an area under concession of 29.2 ha, with a vertical silo allowing it to increase its storage area by 254,000 m<sup>2</sup>. The terminal has a capacity for 41,500 vehicles of which 21,500 correspond to uncovered places and the remaining 20,000 to covered places. It also has a vehicle personalisation centre and protection-removing tunnel.

Setram operates an area under concession of 5.7 hectares.

### **Bulk grain and seed terminal**

22B Contradic Est wharf is home to the Ergransa terminal, specialised in the reception of bulk grains and seeds. It has multicellular silos with capacity for 170,000 t. At the terminal there is a pneumatic discharge operational capacity: of 900 t/h.

### **Terminals for milling soya beans**

26B Álvarez de la Campa and 22B Contradic West wharves are home to the Cargill España, SA and Moyresa industries, specialised in the traffic of soybeans. They have milling plants with a capacity of 1,400,000 t.

### **Bulk cement reception and embarking terminal**

On 22C Contradic, 26B Álvarez de la Campa and 01 Adossat wharves there are the cement terminals, Portcemen, SA and CEMEX, SA. These terminals have silos with capacity for 104,800 t.

### **Potash loading terminal**

On 22A Contradic Nord wharf we can find Tramer SA, a terminal dedicated to the loading of potash. It has a maximum storage capacity of 80,000 t and is equipped with two gantry cranes with capacity from 400 to 700 t/hour.

### **Terminals for the loading, unloading and storage of liquified gases and liquid in bulk**

The Port of Barcelona houses the following specialised terminals in this segment of traffic: Enagas, SA (natural gas), Relisa (oils), Tepsa (chemicals and refined petroleum), Terquimsa (liquid chemicals), Decal (chemicals and refined petroleum), CLH, SA (refined petroleum), Sadesa (oils), Demagrisa (oils) and Loiret & Haëntjens Esp., SA (molasses). These terminals are located on 32 Inflamables, 19 Sant Bertran, 22 Contradic and Tram IV wharves. They occupy a total area of 65.5 hectares with an exclusive berthing line of 2,390 m and a maximum draught of 12 m. The total storage capacity is 1,200,000 m<sup>3</sup>.

### **Fruit Terminal**

20C Ponent wharf houses the Barcelona Fruit Terminal. It has 5,556 m<sup>2</sup> of refrigerated warehouse space, with three independent temperature controls, simultaneous storage of up to 6,000 pallets, computerised bar code control system and a loading platform which can accommodate up to 150 lorries per day.

**Coffee and Cocoa Terminal**

On 26 Álvarez de la Campa wharf is the BIT SA terminal, with an area of 11,000 m<sup>2</sup> and a storage capacity for coffee and cocoa of 14,000 t. The terminal is under duty-free control and is type approved by the LIFFE (London International Financial Futures and Options Exchange), necessary for the delivery and auctioning of coffee.

**Non-Ferrous Metals Terminal**

30 Dàrsena Sud wharve we can find the non-ferrous metals terminal, Barcelona Metals, SA, specialised in the handling, storage and distribution of metals and their alloys: aluminium, copper, nickel, lead, tin and zinc. Type approved by the London Metals Exchange (LME)

**Perishable Goods Terminal**

19 Sant Bertran wharf houses Frigoscandia Logística. The terminal has a cold storage facility of 8,609 m<sup>2</sup> for the storage of perishable goods whose stores have a capacity of 75,000 m<sup>3</sup>, and a freezing tunnel. This terminal is type-approved for intracommunity storage.

## 2.11. General map of Port

### **3 Authorised private-sector construction works and activities**

**Although the land itself is owned by the public sector, most of this is leased out through a number of legal deeds to private companies, which render port services. This chapter first contains a list of all the spaces, organised by wharf, which were leased out to private companies before the onset of 2003, with specific details as to size, functional use, the date on which authorisation was granted and the levy paid to the Barcelona Port Authority.**

**Following that there is a list of all the construction works and activities authorised in 2003.**

## **Introduction**

- 3.1. Authorised before 2003 and currently in force**
- 3.2. Authorised in 2003**

### 3 Authorised private-sector construction works and activities

## 4 Traffic statistics

**This chapter provides an extensive description of traffic in the Port of Barcelona during 2003.**

**These statistics show the movement of passengers, the number of vessels entering the Port - classified by size, flag and the type of cargo traffic. Point 4.7 contains specific information on containerised traffic and point 4.8 provides a summary of traffic in the Port of Barcelona as a whole.**

## **Introduction**

### **4.1. Passenger traffic**

#### **4.1.1. Passengers**

##### **4.1.1.1. Number of passengers**

##### **4.1.1.2. Domestic passenger traffic. Ports of origin and destination, number**

##### **4.1.2. Cars with passengers. Number of units**

### **4.2. Ships**

#### **4.2.1. Merchant vessels entering the port during the year.**

##### **4.2.1.1. Distribution by type of navigation and tonnage**

##### **4.2.1.2. Distribution by flags**

##### **4.2.1.3. Distribution by type of vessel**

#### **4.2.2. Warships entering during the year**

#### **4.2.3. Fishing vessels**

#### **4.2.4. Pleasure craft**

### **4.3. Goods**

#### **4.3.1. Goods by wharves and service berths**

##### **4.3.1.1. Unloaded by wharves and service berths**

##### **4.3.1.2. Loaded on service wharves and berths**

##### **4.3.1.3. Total unloaded and loaded on service wharves and berths**

#### **4.3.2. Handled on private wharves and berths**

##### **4.3.2.1. Unloaded on private wharves and berths**

##### **4.3.2.2. Loaded on private wharves and berths**

##### **4.3.2.3. Total unloaded and loaded on private wharves and berths**

#### **4.3.3. Unloaded and loaded during the year**

##### **4.3.3.1. Total unloaded**

##### **4.3.3.2. Total loaded**

##### **4.3.3.3. Total unloaded and loaded**

#### **4.3.4. Total cargo by nationality of ports of origin and destination (t)**

#### **4.3.5. Transchipped cargo**

#### **4.3.6. Classification of cargo by tariff T-3 (t)**

#### **4.3.7. Classification of cargo by type (t)**

#### **4.3.7. bis Classification of cargo on transit, entries and departures by sea, according to type (t)**

#### **4.3.8. Roll-on / Roll-off traffic (t)**

### **4.4. Local or river traffic (t)**

### **4.5. Ship supplies**

### **4.6. Fish catches**

### **4.7. Container traffic**

#### **4.7.1. Container over 10 and under 20 feet**

#### **4.7.2. 20-Feet containers**

#### **4.7.3. Containers over 20 feet**

**4.7.4. Total containers**

**4.7.4.1. Total containers in transit**

**4.7.5. Total T.E.U. Containers**

**4.7.5.1. Total T.E.U. containers in transit**

**4.7.6. Goods transported in containers classified by type (t)**

**4.8. General summary of maritime traffic**

**4.8.1. General table number 1**

**4.8.2. General table number 2 (Including local traffic,  
supplies and fishing)**

**4.8.3. General table number 3**

**4.8.4. General table number 4**

**4.8.5. General table number 5**

**4.9. Land traffic**

## 4 Traffic statistics

### 4.1. Passenger traffic

#### 4.1.1. Passengers

## 5 Use of the Port

This chapter describes the activity at the Port of Barcelona during 2003 from a different perspective from that of the previous chapter. It offers data on the use of the many Port facilities, including the cargo loaded and unloaded on each wharf, the number of vessels entering dry dock and their tonnage, and the sum of the lengths of all vessels berthing at the Port in 2003.

## **Introduction**

- 5.0. Use of wharves (t)**
- 5.1. Basins**
- 5.2. Pointed mooring**
- 5.3. Berths**
- 5.4. Area utilisation (t/day)**
- 5.5. Mechanical shore equipment.**
  - 5.5.1. Cranes**
  - 5.5.2. Special facilities**
- 5.6. Conveyor trucks**
- 5.7. Conveyor belts**
- 5.8. Mechanical shovels**
- 5.9. Railways shunting, locomotives**
- 5.10. Wagons**
- 5.11. Trucks**
- 5.12. Weighbridges**
- 5.13. Floating cranes**
- 5.14. Tugboats**
- 5.15. Slipways**
- 5.16. Floating dock**
- 5.17. Barges**
- 5.18. Dry dock**

## 6.2. Brief description of the most important works

### 1 MODIFICATION OF THE BUILDING PROJECT FOR THE SEA DEFENCES OF THE OPENING OF THE NEW ENTRANCE

In order to improve the passage of fishing vessels, pleasure craft, fast ferries and tourist cruisers we envisage building a new entrance mouth on the Llevant wharf, which will avoid having to travel 7 kilometres within the port to get to the entrance mouth. This will notably reduce the number of vessels sailing through the channels and docks of the port, with a subsequent increase in safety for maritime shipping.

Furthermore, the new entrance mouth will allow renewal of port waters and will improve environmental conditions.

The works comprise the construction of a seawall 1,500 metres long which runs parallel to the current breakwater, and made up of an initial sloping stretch concrete blocks up to 40 Tn supported in successive layers of rockpile; then a second stretch of 500 m. made up of floating caissons of reinforced concrete of 33.75 m x 19.60 m x 19.50 m.

### 2 MODIFICATION OF THE BUILDING PROJECT FOR THE EXTENSION OF THE EAST SEAWALL

The current port was planned in the late sixties and early seventies, and its physical layout is very similar to that of the late eighties, which then handled some 18 million Tn. Therefore it should be noted that:

Current traffic forecasts, which in 2000 were more than 30 million Tn, are way over the most optimistic figures of the 1989 Master Plan.

The Port of Barcelona is currently clearly suffering from a lack of space, because of the delay in the execution of the works foreseen in the Master Plan, especially the delay in the diversion of the river Llobregat.

The new seawalls have to be built now to create a larger area of sheltered waters, making it possible to build the wharves necessary to face up to the demand.

The project consists of the construction of a sloping seawall 1,968 m long with a type section, subsequent to prior dredging of 3m, made up of solid concrete blocks of 50 Tn, resting on which successive layers of rockpile with an emerging wall of solid concrete crowned at a height of +12.00.

### 3 MODIFICATION OF THE BUILDING PROJECT FOR THE ENLARGEMENT OF THE SOUTH SEAWALL STRETCHES 1

The project consists of the construction of a seawall with a total length of 3,700 m, divided into two stretches:

Stretch 1 is a sloping seawall 2,000 m long, made up of solid concrete blocks of up to 60 tonnes, resting on successive layers of rockpile with an emerging wall of solid concrete and crowned with an emerging solid concrete wall.

Stretch 2 is vertical seawall 1,700 m long made up concrete caissons measuring 24 x 17 m. These caissons rest upon on a banked stone rockpile, after prior dredging of the area, with an emerging wall of reinforced concrete.

The project also includes the building of enclosures annexed to the South Seawall, covering an area of 50 has, achieved by building a breakwater parallel to the coast and closures perpendicular to it, made up of rockpile, making it possible to fill with material from the dredging of the river diversion works and from the dredging works of part of the future dock.

### 4 MODIFICATION OF THE REMODELLING OF THE MONTJUÏC LIGHTHOUSE

As a result of the need for greater space for the Port Community, we envisage using this building as the Community headquarters.  
This would involve enlarging and remodelling the lighthouse building including reinforcing the foundations of the building and the improving the structure, and adapting the new offices and services using by creating a new underground floor.

## **5 DRAFTING OF THE PROJECT FOR THE PORT CONTROL TOWER**

This involves building the control and watch tower of the port of Barcelona and an annex for the pilots and seafarers. There is also a proposal to build a parking area. The tower is 46 m tall, with 7 storeys, of which only the top three will be fitted, for control, crisis and technical matters, respectively.  
The tower is to have a metal structure and the annex a concrete one. The project is planned to have all kinds of working facilities.

## **6 ENLARGEMENT OF THE ADOSSAT WHARF- PHASE 1**

The "Adossat wharf phase 1" project was completed in the year 2000, and consisted of the building of the infrastructure involving 700 m of berthing line 16 m deep, and the subsequent filling of 12 has of terrace.  
Surfacing is required to provide the new wharf and the terrace with conditions allowing it to be run as a container terminal, as well as the construction of a network of drains and service ditches for drinking water, electricity and communications.  
The works comprised the paving of a terrace of 119,000 m<sup>2</sup> using a roadway made up of a layer of 1m thick quarry ballast, successive layers of artificial ballast and gravel-cement 550 mm thick and high-module asphalt aggregate 280 mm thick.  
Finally, also included are 2,800 m of high-density polyethylene drain piping for different services, and their surface boxes.

## **7 ENLARGEMENT OF THE ADOSSAT WHARF PHASE 2 EMBANKMENT WORKS**

The project is justified by the need to provide continuity to the wharf, the first phase of which is already built , and to the rest of the Adossat wharf.  
This involves the building of a bank 7 m wide with quarry ballast over a length of 300 m, up to the future location of the wharf, and the construction of another bank perpendicular to the previous one, at the level of the Porta Coeli building 100 m long.

## **8 COMPLEMENTARY WORKS OF THE PROJECT FOR REINFORCING THE ROAD SURFACE ENLARGEMENT OF THE**

The works consisted of the reinforcing of the surface, over a length of 535 m on the wharfside, and a width of 30 m. It includes the demolition of the current surface to a depth of 35 cm, the construction of a surface made up of 10 cm of H-100 lean concrete, and 25 cm of continuous HAS-30/20/P/IIIa concrete, reinforced lengthways with 20 cm diameter steel bars, and crossways with 12 cm diameter bars.  
The south corner of the wharf pavement, not used for unloading, will be built using 30 cm of artificial quarry ballast and 17 cm of high-module asphalt aggregate mix.

## **9 COASTAL CORRECTIVE MEASURES PHASE 1**

The work involves the building of a breakwater 1,120 m long as the extension of the low water bank of the right shore of the river Llobregat. The breakwater is made up of solid concrete blocks of up to 27 Tn, resting upon successive layers of rockpile, and creates the necessary protection to provide stability in the beaches to be made to the south.

## **10 COASTAL CORRECTIVE MEASURES PHASE 2**

The Environmental Impact Study of the works foreseen in the Master Plan of the Port of Barcelona (drafted in February 1999) presents a series of corrective measures to avoid the erosion of the coastline to the south of the port, mainly due to the effects of the new infrastructures on coastal transport. These comprise the building of a jetty on the right bank of the La Bunyola canal, as well as the providing of materials for building a new beach south of the groyne.  
The works involved the creation of a new beach area measuring some 11 ha, running 900 m along the coastline between the La Ricarda lagoon and the la Bunyola and Sabogal canals, involving 500,000 m<sup>3</sup> of sand. The sand mainly comes from the dredging works in the area between the current and future mouth of the Llobregat.  
The beach will be stabilised through the building of a 290 m long seawall perpendicular to the coast made up of rockpile of up to 5 tonnes..

## **11 COASTAL CORRECTIVE MEASURES PHASE 3-A**

The work involved the provision of a million cubic metres of sand to create a large beach area located between the new mouth of the river Llobregat and the La Bunyola canal. The sand is the result of dredging inside the areas next to the South seawall.

## **12 DEVELOPMENT OF THE SANT BERTRAN WHARF PHASE I**

The works involve remodelling up to 45,000 m<sup>2</sup> of port land located in front of the Sant Bertran wharf.  
They involve the creation of a 600 m long road, which will link the roundabout that connects the Barcelona wharf with a new roundabout, which is also part of the project and will be placed in front of the access to the Porta d'Europa bridge.  
The road is made up of long pedestrian walkway on the sea side measuring some 11 m wide and a road with up to five lanes for traffic. The finishings for the development are granite stone in the curbs and crossing places, a pavement made of pieces of dark grey prefabricated concrete along the edges, and tarmac for the road surfaces. The project will be completed with thick vegetation along the boulevard, lawn areas, new lighting and urban furniture.

## **13 REINFORCING THE ROAD SURFACE ON THE ENLARGEMENT OF THE SOUTH WHARF**

The work involved the reinforcing of 203,000 m<sup>2</sup> of the terrace corresponding to the extension of the South wharf, and the spreading of 17 cm of high module asphalt mix and BM type-1modified bitumen.

## **14 PREPARATION OF THE DRAFT PROJECT FOR REMODELLING OF THE FISHING AREA**

The facilities of the current fishing dock of the Port of Barcelona, mostly the fish exchange and ice factory, require a series of one-off actions in order to provide them with optimum working conditions. The fish exchange is in an extremely precarious location, from a structural, aesthetic and operative point of view, which is why it would be advisable to abandon the current facilities and construct a new building. On the other hand, due to current demand, the ice factory needs to increase productivity by investing in improvements in the current facilities, both from the point of view of the area available and of the equipment. There is agreement in the Barcelona City Council on the development of this area and the area around the North entrance mouth, and a Special Plan has been envisaged, which will be put to the City Council. The works that come within this project consist of refurbishing a new exchange on the site of the current one, for the auctioning of fish catches, and remodelling the fishing net shed and the current ice factory, in order to increase productivity. Given the nature of this investment, we have requested financing with IFOP funds.

## **15 REMODELLING PORT VELL SEWERAGE.**

Owing to complaints received from residents due to the foul smells near the crossing of the Passeig Joan de Borbó and Carrer Ginebra, due to the installation of collectors for the sewage flowing from the leisure complex built over recent years on the Espanya wharf, and the surrounding area, the Port of Barcelona requires a network of drains to make up for the shortcomings of the current network and for waste waters to be properly treated in the treatment plants of the Baix Llobregat and the Besòs.

The works involve the building of a new network of drains around the Port Vell, including their connection to the Barcelona wharf sector 3 using a 700 m long gravity network made up of 400 mm diameter tubes, the connection of the Espanya wharf using an emptying network using a 1,600 m long network of 100 mm diameter tubes up to the emptying centre located on the Fishermen's wharf, and pumping up to the interceptor on the Passeig Marítim using 1,078 m linear metres of 400 mm diameter tubes.

## **16 REMODELLING OF THE SEWERS OF THE PORT VELL. REMOTE CONTROL**

This consists of the installation of the Control Centre at the premises of CLABSA , and of a secondary centre at the ASTA building to allow correct treatment of the waste waters generated within the port enclosure.

## **17 SOUTH ACCESS TO SECTOR 8 PHASE 2**

The process of expansion of the port of Barcelona to the inflammables area, with the creation of the new Delta I terminals park has made it vital to create a high-quality access to the area which also has sufficient capacity to absorb and order the current and future traffic.

The project involves the second phase of the remodelling of the south access to sector 8, in which it is planned to improve the accesses to the Delta I Terminals Park through the construction of a roundabout that can channel the traffic generated by the area, including a new access road. This second phase foresees the works necessary for the construction of the roundabout and the new road access to the Delta I concession.

## **18 REINFORCING OF THE SURFACE OF RINGROAD STRETCHES 3, IV, V AND VI**

The work involved reinforcing the surface of the F-8 terrace with 3 cm thick soundproofing, levelling the services manholes, and a roundabout 46 m in diameter at the TERCAT access.

## **19 PROJECT OF THE BRIDGE LINKING THE PORT AND AIRPORT BY ROAD**

The current and future needs for communication between the port and the airport lead to a need to improve the ease of travel between the two centres. This is the reason behind the plans to build a bridge on the future bed of the river Llobregat, a vital part of the future road axis.

As a prior phase to the construction, a call for ideas has been issued between the main bridge builders, which will make it possible to choose between different options of the highest technical quality.

## **20 REMODELLING OF THE BOSCH I ALSINA WHARF PHASE 3**

After the updates made in 1990 and 1991 by Barcelona City Council and the Port of Barcelona, an agreement has been formalised between Barcelona Port Authority, Barcelona City Council and the company holding the concession to the car park (SMASSA), in which the port's stake holding is 59.75% of the total of the works.

The works consist of remodelling 15,500 m<sup>2</sup> of the public area between the Portal de la Pau square and Antonio López square, and between the Ronda Litoral ringroad and the Passeig Colom. They also involve remodelling a car park covering 7,300 m<sup>2</sup> located under this area managed by BSM.

## **21 ORNAMENTATION WORKS OF THE ACCESS TO BARCELONA WHARF**

Different actions have been carried out on the Barcelona wharf, a notable example of which is the World Trade Center building; an emblematic building consisting of office space, a hotel and all kinds of complementary services to cover the increasing needs of the tourist flows visiting the city.

Still pending to date is the conclusion of the development of the wharf with ornamentation in line with the level of building and finishings used in this area. Bearing in mind that Barcelona is soon to host the Universal Forum of Cultures 2004, it has been considered appropriate to set up a sculpture on one of the main points of connection between port and city - the Barcelona wharf. This sculpture is representative of the city, and offers the passer-by an image of a modern and cultural city, whilst constituting a representative image of the port of Barcelona, and an element that sets it apart for the tourist.

The work involved the construction of a sculpture called Waves by Andreu Alfaro, and is made up of seven stainless steel circular section arches with a maximum height of 42 m.

## **22 COMPLEMENTARY LIGHTING ON THE ESPANYA WHARF**

As a result of the large number of people who visit the area around the Espanya wharf at night and the need to facilitate the mobility of the visitors, as well as an appropriate control by the security guards, it is necessary to reinforce the level of lighting of this area to make it fully operative.

This involves the building of a new network of public lighting which, added to the existing network, will improve the overall lighting of the wharf wall, the Passeig d'Ítaca, the access road and the gardened area of the Port Vell viewpoint. It includes the necessary civil engineering works, electrical infrastructures, lamp posts, projectors, controls and all the additional elements.

## **23 REMODELLING OF THE GROUND FLOOR OF THE APB HEADQUARTERS**

As a result of the CILSA offices moving to the ZAL, there is now room on the sea side of the building housing the headquarters of the APB, in the Portal de la Pau, which needs to be remodelled.  
This involves the adaptation of the old CILSA offices, to be turned into offices and conference areas measuring 534 m<sup>2</sup>. The existing services will be reestablished in the general hallway and the stairwell will also be remodelled.

#### **24 RAIL TERMINAL IN Z STREET**

The work involved the rebuilding of a 300 m long siding in a single concreted line, with a track of 54 kg/linear metres and a stretch of 120 linear metres of double track rail terminal also made of concrete.

#### **25 SURFACING OF THE NEW SETRAM CONCESSION STREET 3 PHASE I**

The work involved developing 30,840 m<sup>2</sup> on streets Y, 3 and Z, located in sector 7 of the port. An area of 25,350 m<sup>2</sup> used for the storage of vehicles, has been covered with a 25 cm consistent layer of artificial quarry ballast and 8 cm of hot bitumen mix.

In the dedicated 5,525 m<sup>2</sup> for the loading and unloading of vehicles a 25 cm layer of artificial quarry ballast has been laid, plus a pavement made up of 25 cm thick HP-40 concrete.

The works also involve a double track concrete rail terminal 200 m long, the terrace's scrap yard, lighting, provided by 3 25 metre towers with 5 4 m projectors.

#### **26 DRAFTING OF THE PROJECT TO DEVELOP THE PG. MARÍTIM BARCELONETA FINAL STRETCH**

The project comprises remodelling, paving, plants and furniture of the stretches at the end of the Passeig Joan de Borbó, some 600 m long, and the Passeig Marítim de la Barceloneta, which includes the Plaça del Mar and the prolongation of the Passeig Maritime up to the North entrance mouth of the port of Barcelona.  
All of these actions comprise the work to be done on an area of some 38,000 m<sup>2</sup>.

#### **27 RELEVELLING OF CRANE TRACKS IN THE ENLARGEMENT OF ADOSSAT WHARF PHASE 1**

Between the enlargement works of the Adossat Wharf phase 1 and its coming into service there have been a series of cases of major subsidence, which require the relevelling of the crane tracks in order to operate the wharf correctly.  
The work involved relevelling and adapting the tracks of the container line over a length of 700 m.

#### **28 DEMOLITIONS AT THE NEW SETRAM CONCESSION ON STREET 3**

The works consisted of the demolition of the industrial premises of the former SIDERCOMES and MASONEILAN concession holders of areas of approximately 3,600 m<sup>2</sup> and 4,250 m<sup>2</sup> up to the level of the surrounding pavement.

Furthermore, concrete surfaces of any other type have been demolished, being irregular surfaces with varying thicknesses up to ground level, including the elements situated above ground level.
